L. fr. Gk]

—Aristotle, basing his theory on the practice of the great Athenian tragedians, said that tragedy should move the reader or spectator to pity and terror, performing a catharsis, or purification by purging, of the emotions. The tragic hero evoked sympathy for his greatness of character but alienated it also—and caused his own downfall—by some personal flaw, esp. arrogant pride (*HUBRIS) Later writers on tragedy also tend to concentrate on these two features: the spectator's involvement—part identification, part repudiation—in the nature of the central figure, and the conflict and final balance of emotion which the greatest tragedy calls forth. It is curiously allied to the greatest comedy: there is the same complexity in the hero (e.g. Molière's Alceste in 'le Misanthrope'), though in comedy the spectator feels a smaller degree of involvement in his fate. But in both comedy and tragedy the spectator is finally reconciled to the hero's fate. The degree to which the dramatist can invoke sympathy and understanding, the bitterness of the fate which overtakes the hero, and yet the ultimate rightness of the result: these three produce the most serious, the most painful, the most inward, and yet the most liberating moments in literature

The 48-inch-diameter pipeline can carry over 2 million barrels of crude oil per day from Alaska's North Slope fields. The pipeline, built by a consortium of 8 oil companies, was completed in 1977 at a cost of nearly $8 billion, making it the costliest private construction project in history

trans·al·pine (trænsǽlpain, trænzǽlpain) *adj* on the north side of the Alps (cf. CISALPINE) [fr. L. *transalpinus*, across the Alps (i.e. from Italy)]

transaminase [illegible]

transamination [illegible] (*chem.*) change of amino acids from one molecule to another, promoted by an enzyme **trans·**[illegible]

transatlantic [illegible] extending across the Atlantic Ocean ‖ pertaining to, characteristic of or coming from the [illegible], *transatlantic cultural influences*

[illegible] comprising the Armenian, Azerbaijan and Georgian Soviet Socialist Republics. Products [illegible] Transcaucasian republic existed until 1936, when it was split up into its present divisions

tran·scend (trænsénd) *v.t.* to be or go beyond the limits or powers of, *to transcend belief* ‖ to surpass, excel, *it transcended all our hopes* [*philos., theol.*, of God or a god] to be above, separate from or independent of (experience, the material universe) [fr. L. *transcendere*]

transcendence [illegible] state or act of being transcendent **tran·scend·**[illegible]

tran·scend·ent (trænsénd·ənt) *adj* beyond nor[illegible]

sible human experience ‖ (in Kant) going beyond the limits of possible knowledge (cf. TRANSCENDENTAL) ‖ being above and independent of the limitations of the material universe (cf. IMMANENT) [fr. L. *transcendens* (*transcendentis*) fr. *transcendere*, to transcend]

tran·scen·den·tal (trænsendent'l) *adj.* belonging to pure reason, prior to all experience and a necessary condition of that experience, *according to Kant space and time are transcendental concepts* (cf. TRANSCENDENT) **tran·scen·dén·tal·ism** *n.* any philosophical system which attributes *a priori* reality to what exists outside the bounds of human experience ‖ an American philosophical school represented by Emerson and characterized by a certain pantheistic mysticism **tran·scen·dén·tal·ist** *n.* [fr. M.L. *transcendentalis*]

transcendental meditation a meditation technique in which mind is released from tension through use of a mantra, creating a feeling of calm and spiritual well-being *abbr.* TM

trans·con·ti·nen·tal (trænskɔntinént'l, trænzkɔntinent'l) *adj.* extending or going across a continent

tran·scribe (trænskráib) *pres. part.* **tran·scribing** *past* and *past part.* **tran·scribed** *v.t.* to copy out in manuscript or type (notes, shorthand etc.) ‖ to arrange or adapt (a piece of music) for an instrument, voice etc. other than that for which it was originally written ‖ (*radio*) to record (material) for broadcast at a later time ‖ (*genetics*) to carry a message from DNA to RNA through the synthesis of an enzyme ‖ *v.i.* to make a transcription [fr. L. *transcribere*]

tran·script (trænskript) *n.* a copy written or typed [O.F. *transcrit*]

transcriptase *REVERSE TRANSCRIPTASE

tran·scrip·tion (trænskrípʃən) *n.* something transcribed ‖ a transcribing or being transcribed [F.]

trans·duce (trænsdú:s) *v.* (*biol.*) to cause the transfer of molecules between microorganisms by means of a viral agent

trans·duc·er (trænsdú:sər, trænzdú:sər, trænsdjú:sər, trænzdjú:sər) *n.* (*phys.*) a device for transferring power, generated in one system, to another system, in the same or another form ‖ (*biol.*) a virus that causes a change in the genetic character of a microorganism through action of nucleic acid [fr. L. *transducere*, to lead across]

trans·earth (trænsə́:rθ) *adj.* (*astronautics*) of the path of a spacecraft between the earth and a celestial body

tran·sect **1.** (trænsekt) *n.* (*bot.*) a line or strip of vegetation chosen for study **2.** (trænsékt) *v.t.* to cut across **tran·séc·tion** *n.* [fr. L. *trans*, across + *secare* (*sectus*), to cut]

tran·sept (trænsept) *n.* either of the two transverse wings of a cruciform church built at right angles to the nave ‖ the entire transverse section crossing between nave and choir in a cruciform church **tran·sép·tal** *adj.* [fr. M.L. or Mod. L. *transseptum* fr. *trans*, across + *septum*, hedge]

trans·fer **1.** (trænsfə́:r, trænzfə́:r, trænsfər, trænzfər) *v. pres. part.* **trans·fer·ring** *past* and *past part.* **trans·ferred** *v.t.* to move from one place or position to another, *the manager was transferred to a different branch* ‖ to redirect from one person or object to another, *to transfer one's affection to someone else* ‖ to pass legal ownership or control of to another person, *he transferred the shares to a nephew* ‖ (*sports*) to trade (a professional player) to another club etc. ‖ (*arts*) to convey (a design etc.) from one surface to another, esp. by transfer paper to a lithograph stone ‖ *v.i.* to get out of one bus, train etc and into another so as to continue a journey ‖ to change one's work or position, esp. within an organization, *he transferred from sales to advertising* **2.** (trænsfər, trænzfər) *n.* a transferring or being transferred ‖ something or someone transferred ‖ a design on paper etc. which can be transferred to another surface ‖ (*law*) an act of conveyance of property from one person to another or the deed drawn up for it ‖ a ticket entitling the bearer to change from one bus or streetcar to another within a specified period **trans·fer·ence** (trænsfərəns, trænzfərəns, trænsfə́:rəns, trænzfə́rəns) *n.* a transferring or being transferred ‖ (*psychoanal.*) the transfer of desires or sentiments, esp. those retained in the unconscious from childhood, to another object, e.g. the redirection of a girl's feelings for her father to a male figure usually much older than herself [fr. L. *transferre*, to carry across]

transfer cell (*botany*) the cell in a plant that exchanges dissolved substances with the outside environment

trans·fer·en·tial (trænsfərénʃəl, trænzfərénʃəl) *adj.* of or relating to transference or to a transfer

transfer factor (*med.*) the immunity protein stored in white blood cells that recognizes a disease and prevents its recurrence; discovered by American biochemist H. Sherwood Lawrence (1916–)

transfer paper a specially prepared coated paper that allows a design on it to be transferred to another surface. Some papers need moisture for this, some need heat, some need pressure

transfer payments public funds distributed to persons for a special purpose in accordance to a legal formula, e.g., social security, unemployment compensation, veterans' benefits

transfer RNA (*genetics*) a form of RNA that combines with amino acids and messenger RNA to cause remaining amino acids to combine in a certain sequence in protein synthesis *abbr.* tRNA *Cf* MESSENGER RNA, RIBOSOMAL RNA

trans·fig·u·ra·tion (trænsfigjuréiʃən, trænzfigjuréiʃən, trænsfigjuréiʃən, trænzfigjuréiʃən) *n.* a transfiguring or being transfigured **the Transfiguration** the change in Christ's appearance described in Matthew xvii and celebrated by the Christian Church on Aug. 6 [fr. L. *transfiguratio* (*transfigurationis*)]

trans·fig·ure (trænsfígjər, trænzfígjər) *pres. part.* **trans·fig·ur·ing** *past* and *past part.* **trans·fig·ured** *v.t.* to change the appearance of in a very great degree, usually in a pleasing way, *the architect had transfigured the old barns, joy transfigured her face* [fr. L. *transfigurare*, to change the shape of]

trans·fix (trænsfíks, trænzfíks) *v.t.* to impale upon or pierce with a pointed instrument ‖ to pierce through or to make as if paralyzed by a strong emotion etc., *transfixed with horror* **trans·fix·ion** *n.* [fr. L. *transfigere* (*transfixus*), to fix through]

trans·form (trænsfɔ́rm, trænzfɔ́rm) *v.t.* to change the form or appearance of, esp. (with 'into') to metamorphose ‖ to change the character or nature of radically ‖ (*phys.*) to change (energy) from one kind to another ‖ (*elec.*) to change (an electric current) into one of different voltage [fr. L. *transformare*]

trans·for·ma·tion (trænsfərméiʃən, trænzfərméiʃən) *n.* a transforming or being transformed ‖ (*old-fash.*) false hair worn to supplement a woman's natural hair, or as a wig ‖ (*genetics*) the taking up of free DNA to acquire genetic properties ‖ (*computer*) the change in composition or structure of data without any change in values or meanings [fr. L.L. *transformatio* (*transformationis*)]

trans·for·ma·tion·al grammar (trænsfərméiʃən'l) a generative grammar with a transformational component, i.e. a section of rules for the transformation and transposition of elements of a sentence to make a different sentence

transformation scene (*pantomime*) an elaborate scene in which the actors and scenery gradually change their appearance in full view of the audience for the lavish finale

trans·form·er (trænsfɔ́rmər, trænzfɔ́rmər) *n.* (*elec.*) a device for converting a varying current from one voltage to another. In a step-up transformer the low-voltage current is passed through a primary coil of a few thick turns, wound on an iron core. An alternating magnetic field is thus created, and this produces, by mutual induction, a high-voltage current in a secondary coil consisting of a large number of turns of thin wire, the ratio of the voltages being roughly equal to that of the number of turns in the two coils. A step-down transformer operates in the reverse sense

transform fault (*geol.*) a crack in the earth's crust in a steplike pattern that is believed to indicate direction of plate movements

trans·fuse (trænsfjú:z, trænzfjú:z) *pres. part.* **trans·fus·ing** *past* and *past part.* **trans·fused** *v.t.* to communicate (a quality) to, *to transfuse one's enthusiasm into a class* ‖ to permeate, *his enthusiasm transfused the class* ‖ to transfer (blood) from one person into the vein of another or from one animal into another ‖ to inject (a saline solution) into a vein ‖ to subject (a patient) to a transfusion [fr. L. *transfundere* (*transfusus*), to pour across]

trans·fu·sion (trænsfjú:ʒən, trænzfjú:ʒən) *n.* a transfusing, esp. of fluids (blood, plasma, solutions containing various foods, minerals or drugs) into the veins of a patient [fr. L. *transfusio* (*transfusionis*)]

trans·gress (trænsgrés, trænzgrés) *v.t.* to break (a rule, law etc.) ‖ to go beyond (a limit etc.) ‖ *v.i.* (*rhet.*) to sin [F. *transgresser*]

trans·gres·sion (trænsgréʃən, trænzgréʃən) *n.* a sin ‖ a transgressing [F.]

trans·gres·sor (trænsgrésər, trænzgrésər) *n.* a person who transgresses

tran·ship (trænʃip) *pres. part.* **tran·ship·ping** *past* and *past part.* **tran·shipped** *v.t.* and *i.* to transship **tran·ship·ment** *n.*

trans·hu·mance (trænshjú:məns, trænzhjú:məns) *n.* the seasonal transfer of livestock to mountain or lowland pastures [F.]

tran·sience (trænʃəns, trænʒəns) *n.* the state or quality of being transient **trán·sien·cy** *n.*

tran·sient (trænʃənt, trænʒənt) **1.** *adj.* brief, short-lived, impermanent ‖ staying for only a short time, esp. of hotel guests **2.** *n.* a person who stays in a hotel etc. for only a short time ‖ a person who has no fixed abode or employment and who wanders about looking for temporary work [fr. L. *transiens* (*transientis*) fr. *transire*, to go across]

trans·il·lu·mi·nate (trænsilú:mineit, trænzilú:mineit) *pres. part.* **trans·il·lu·mi·nat·ing** *past* and *past part.* **trans·il·lu·mi·nat·ed** *v.t.* (*med.*) to pass a strong light through (tissue or an organ) for examination

tran·sis·tor (trænzistər) *n.* any of several types of device incorporating an arrangement of semiconductor material (esp. germanium with controlled low concentrations of arsenic, indium, antimony etc.) and suitable contacts capable of performing many of the functions of thermionic and photoemissive tubes (such as power, voltage or current amplification) with low power requirements and large saving of space ‖ a radio set using transistors instead of tubes [TRANSFER + RESISTOR]

trans·it (trænsit, trænzit) **1.** *n.* a moving or being moved across, over, or from one place to another ‖ the movement of one heavenly body across the disk of a larger one, or its apparent movement across a meridian ‖ a transit instrument ‖ the transport or conveyance of goods or persons from one place to another **in transit** in the process of being moved ‖ (*aerospace*) navigation satellite that utilizes the Doppler effect for fixing position of ships and aircraft **2.** *v.t.* (*astron.*) to move across the disk of (a larger heavenly body) ‖ (*astron.*) to cross (a meridian) ‖ to turn (a telescope etc.) about its horizontal transverse axis ‖ *v.i.* to make a transit [fr. L. *transire* (*transitus*), to go across]

transit compass a variety of theodolite used to measure horizontal angles

transit instrument an instrument furnished with a rotating telescope and a circular scale, used to observe the transit of a heavenly body across a meridian ‖ a transit compass

tran·si·tion (trænziʃən, trænsiʃən, *Br.* trænsípən) *n.* a change or passage from one place, action, mood, topic etc. to another ‖ a development that forms part of an ordered progression, *a transition from limited autonomy to full independence* ‖ (*mus.*) a passage which joins two others more important than itself ‖ (*mus.*) a sudden change of key not effected by modulation ‖ (*genetics*) a mutation in RNA or DNA in which a purine or a pyrimidine base is substituted for another **tran·si·tion·al** *adj.* [fr. L. *transitio* (*transitionis*)]

transition point (*phys.*) the temperature at which two physical states of the same substance are in equilibrium ‖ (*loosely*) the temperature at which a substance changes its physical state

transition temperature (*phys.*) a transition point

tran·si·tive (trænsitiv, trænzitiv) **1.** *adj.* (*gram.*, of certain verbs) expressing an action directed toward or performed on some person or thing (*DIRECT OBJECT) **2.** *n.* a verb or construction which is transitive [fr. L.L. *transitivus*]

tran·si·to·ri·ly (trænsitɔrili:, trænzitɔrili:, trænsitourili:, trænzitourili:) *adv.* in a transitory manner

tran·si·to·ri·ness (trænsitɔri:nis, trænzitɔri:nis, trænsitouri:nis, trænzitouri:nis) *n.* the state or quality of being transitory

tran·si·to·ry (trænsitɔri:, trænzitɔri:, trænsitouri:, trænzitouri:) *adj.* passing, temporary, not lasting [O.F. *transitoire*]

Trans·jor·dan (trænsdʒɔ́rd'n, trænzdʒɔ́rd'n) the former name of the Hashimite Kingdom of Jordan (*JORDAN)

Trans·kei (trænskaɪ) *n.* enclave nation in the Republic of South Africa whose 'independence' since October 15, 1976 has been largely unrecognized by other nations. It is the home of the Xhosa people

Trans·kei·an Territories (trænskéiən, trænzkéiən) an African reserve (area 16,554 sq. miles, pop. 2,238,000), mainly pasture and grazing land, in N.E. Cape Province, South Africa. It comprises Transkei and Tembuland (inhabited by Kaffirs), Griqualand East (inhabited by people of mixed Bushman and Hottentot origin) and Pondoland (inhabited by a Bantu people related to the Zulus). Capital: Umtata (pop. 7,000)

trans·late (trænzléit, trænsléit) *pres. part.* **trans·lat·ing** *past* and *past part.* **trans·lat·ed** *v.t.* to put (a word, text or language) into another language retaining the sense ‖ to put in different words of the same language, esp. in order to make clearer, *to translate scientific language for the layman* ‖ to convert into another form, *to translate words into deeds* ‖ (*eccles.*) to transfer (a bishop) to another see ‖ to retransmit (a telegraphic message) ‖ (*phys.*) to subject (a body) to simple displacement, without any other mode of motion ‖ to convey (someone) straight to heaven or paradise without death's intervention ‖ (*genetics*) to form an amino acid molecule from codon material provided by messenger RNA ‖ *v.i.* to make a translation or translations ‖ to be able to be translated [prob. fr. L. *transferre* (*translatus*)]

trans·la·tion (trænzléiʃən, trænsléiʃən) *n.* a translating or being translated ‖ something translated, either the original or the new version ‖ (*phys.*) motion by displacement only **trans·lá·tion·al** *adj.* [O.F. or fr. L. *translatio* (*translationis*)]

trans·la·tor (trænzléitər, trænsléitər, trænzleitər, trænsleitər) *n.* a person who makes linguistic translations [O.F. or L.]

trans·lit·er·ate (trænzlítəreit, trænslítəreit) *pres. part.* **trans·lit·er·at·ing** *past* and *past part.* **trans·lit·er·at·ed** *v.t.* to replace (letters of one alphabet) by letters of another with the same phonetic sounds ‖ to write (a word or words) in the letters of another alphabet **trans·lit·er·á·tion** *n.* [fr. L. *trans,* across+*littera,* letter]

trans·lo·cate (trænzlóukeit, trænslóukeit) *pres. part.* **trans·lo·cat·ing** *past* and *past part.* **trans·lo·cat·ed** *v.t.* to cause to change location, esp. to transfer (dissolved food materials) from one position in a plant body to another **trans·lo·cá·tion** *n.* the passage of food material in solution inside the body of a plant ‖ the transfer of part of a chromosome to another part of the same chromosome or to a different chromosome

trans·lu·cence (trænzlú:s'ns, trænslú:s'ns) *n.* the state or quality of being translucent **trans·lú·cen·cy** *n.*

trans·lu·cent (trænzlú:s'nt, trænslú:s'nt) *adj.* of a medium through which light passes, but in such a way that a clear image cannot be formed of the object viewed through it (cf. TRANSPARENT, cf. OPAQUE) [fr. *translucens* (*translucentis*) fr. *translucere,* to shine through]

trans·lu·cid (trænzlú:sid, trænslú:sid) *adj.* translucent [fr. L. *translucidus*]

trans·lu·nar (trænslú:nə:r) *adj.* (*astronautics*) of the travel of a spacecraft from earth toward the moon

trans·mem·brane (trænsmémbrein) *adj.* of the transfer from one side of a membrane to another

trans·mi·grant (trænzmáigrənt, trænsmáigrənt) *n.* a person passing through a country on his way to a new country in which he is to settle

trans·mi·grate (trænzmáigreit, trænsmáigreit) *pres. part.* **trans·mi·grat·ing** *past* and *past part.* **trans·mi·grat·ed** *v.i.* to migrate from one place or country to another ‖ (of the soul) to pass at death from one body to another [fr. L. *transmigrare* (*transmigratus*)]

trans·mi·gra·tion (trænzmaigréiʃən, trænsmaigréiʃən) *n.* the act or an instance of transmigrating ‖ the transmigration of souls [fr. L.L. *transmigratio* (*transmigrationis*)]

transmigration of souls the passing of individual souls at death into new bodies or different forms of life

trans·mi·gra·to·ry (trænzmáigrətəri, trænzmáigrətouri:) *adj.* of transmigration ‖ tending to or in the habit of transmigrating

trans·mis·si·bil·i·ty (trænzmisəbíliti:, trænsmisəbíliti:) *n.* the state or quality of being transmissible

trans·mis·si·ble (trænzmísəbl, trænsmísəbl) *adj.* able to be transmitted [fr. L. *transmittere* (*transmissus*)]

trans·mis·sion (trænzmíʃən, trænsmíʃən) *n.* a transmitting or being transmitted ‖ something transmitted, esp. a radio or television program ‖ the passage of radio waves in the space between the transmitting and receiving stations ‖ the mechanism (e.g. clutch, gearbox, transmission shaft) by which power is transmitted from the engine to the axle of a car etc. [fr. L. *transmissio* (*transmissionis*)]

transmission electron microscope microscope that illuminates an image by transmitted electrons passing through the specimen

trans·mit (trænzmít, trænsmít) *pres. part.* **trans·mit·ting** *past* and *past part.* **trans·mit·ted** *v.t.* to send, or cause or permit to pass, from one place or person to another ‖ to be a medium for, or serve to communicate (light, heat, sound etc.) ‖ to communicate ‖ to pass on to others by inheritance or heredity ‖ to pass on (an infection or disease) to a person, animal or organism ‖ to convey (drive) from one mechanical part to another ‖ to send (a signal) by radio waves or over a wire ‖ *v.i.* to send out a signal by radio waves or over a wire **trans·mít·ter** *n.* a person who or thing which transmits [fr. L. *transmittere,* to send across]

trans·mog·ri·fy (trænzmógrifai, trænsmógrifai) *v.t. pres. part.* **trans·mog·ri·fy·ing** *past* and *past part.* **trans·mog·ri·fied** to change or alter utterly in form or appearance, esp. with grotesque or humorous effect [origin unknown]

trans·mut·a·bil·i·ty (trænzmju:təbíliti:, trænsmju:təbíliti:) *n.* the state or quality of being transmutable

trans·mut·a·ble (trænzmjú:təb'l trænsmjú:təb'l) *adj.* capable of being transmuted **trans·mút·a·bly** *adv.* [fr. M.L. *transmutabilis*]

trans·mu·ta·tion (trænzmju:téiʃən, trænsmju:téiʃən) *n.* a transmuting or being transmuted ‖ (*chem.*) the change of one element into another ‖ (*biol.*) the change of one species into another [fr. L.L. *transmutatio* (*transmutationis*)]

trans·mute (trænzmjú:t, trænsmjú:t) *pres. part.* **trans·mut·ing** *past* and *past part.* **trans·mut·ed** *v.t.* to cause to change in form, nature or substance ‖ *v.i.* to be transmuted [fr. L. *transmutare,* to change]

tran·som (trænsəm) *n.* a lintel ‖ a horizontal bar in a window (cf. MULLION) or between the top of a door and a window directly over it ‖ a window above the lintel of esp. a door ‖ the horizontal bar of a cross or a gallows ‖ any of various horizonal beams, esp. one supporting the afterdeck of a vessel [M.E. *traunsum* prob. fr. L. *transtrum,* crossbeam]

tran·son·ic (trænsɔnik) *adj.* (*aeron.*) of, relating to or moving at a speed close to the speed of sound

trans·pa·cif·ic (trænspəsífik, trænzpəsífik) *adj* on the other side of the Pacific Ocean ‖ crossing the Pacific Ocean

trans·par·en·cy (trænspéərənsi:, trænzpéərənsi:, trænspærənsi:, trænzpærənsi:) *pl.* **trans·par·en·cies** *n.* the state or quality of being transparent ‖ something transparent, esp. a color photograph, picture or design imprinted on a thin transparent piece of film, glass etc. and viewed by transmitted light [fr. M.L. *transparentia*]

trans·par·ent (trænspéərənt, trænzpéərənt, trænspærənt, trænzpærənt) *adj.* of a medium through which light can travel with minimal scattering, so that objects can be viewed clearly through it (cf. TRANSLUCENT, cf. OPAQUE) ‖ easy to detect or perceive, *a transparent lie* ‖ of a medium through which radiation of any sort can travel without deformation [fr. M.L. *transparens* (*transparentis*) fr. *transparere,* to appear through]

trans·pierce (trænspíərs, trænzpíərs) *v.t. pres. part* **trans·pierc·ing** *past* and *past part.* **trans·pierced** to pierce through [F. *transpercer*]

tran·spi·ra·tion (trænspiréiʃən, trænzpiréiʃən) *n.* the giving off of water vapor through the pores or stomata ‖ the passage of gas through a capillary tube or porous substance because of pressure or temperature differences [fr. M.L. or Mod. L. *transpiratio* (*transpirationis*)]

tran·spire (trænspáiər, trænzpáiər) *pres. part.* **tran·spir·ing** *past* and *past part.* **tran·spired** *v.t.* to give off (water vapor) through the pores or stomata ‖ *v.i.* to be given off in this way ‖ (*colloq.*) to happen, *it transpired that he was a spy* ‖ (*colloq.*) to occur, *what transpired at the meeting?* [F. *transpirer* fr. M.L. *transpirare,* to breathe through]

trans·plant 1. (trænsplænt, trænzplænt, trænsplúnt, trænzplúnt) *v.t.* to remove and plant in another place ‖ to settle (people or animals) in another area ‖ (*surgery*) to graft (living tissue or an organ) from one part of the body to another or from one person to another ‖ *v.i.* to bear being transplanted **2.** (trænsplænt, trænzplænt, trænsplunt, trænzplunt) *n.* a transplanting ‖ something transplanted, e.g. body tissue **trans·plan·tá·tion** *n.* [fr. L. *transplantare*]

trans·plan·tate (trænsplántət) *n.* (*med.*) tissue that has been used in a transplant

tran·spon·der (trænspɔndə:r) *n.* device capable of receiving a signal and responding immediately, e.g., in a satellite

trans·port 1. (trænspɔrt, trænzpɔrt, trænspourt, trænzpourt) *v.t.* to carry (goods, people or animals) from one place to another ‖ (*hist.*) to ship (a convict) to a penal colony overseas ‖ to cause (a person) to be carried away with strong emotion **2.** (trænspɔrt, trænzpɔrt, trænspourt, trænzpourt) *n.* the act or process of transporting ‖ a vessel or vehicle, esp. a ship or large aircraft, used to transport ‖ (*hist.*) a convict sentenced to be transported ‖ the state of being very strongly moved by an emotion, *in a transport of rage* ‖ (*computer*) the mechanism that carries disk, tape, or paper past the sensing and recording heads **trans·por·tá·tion** *n.* a transporting or being transported ‖ a means of transporting ‖ the cost of transporting ‖ (*hist.*) the punishment of shipping a convict to a penal colony [fr. F *transporter*]

Transportation, U.S. Department of (*abbr.* DOT) a cabinet-level department of the U.S. government. Established in 1966, it is headed by the secretary of transportation. Major divisions are U.S. Coast Guard, Federal Aviation Administration, Federal Highway Administration, Federal Railroad Administration, Urban Mass Transportation Administration, Maritime Administration, St. Lawrence Seaway Development Corp. and National Highway Traffic Safety Administration

transporter bridge a bridge with a high span from which a movable platform is suspended on which loads can be conveyed across a navigable waterway without disturbing shipping

trans·pose (trænspóuz, trænzpóuz) *pres. part.* **trans·pos·ing** *past* and *past part.* **trans·posed** *v.t.* to cause (two things) to change places, each being made to occupy the position previously occupied by the other (esp. words in a sentence, sentences in a paragraph etc.) ‖ (*algebra*) to move (a term) from one side to the other of an equation sign (involving a change of sign) ‖ to write or play (a musical composition) in a key other than the original ‖ *v.i.* to write or play music in a key other than the original ‖ to admit of transposing [F. *transposer*]

transposing instrument a musical instrument, e.g. the clarinet, that sounds at a fixed interval above or below the note written

Trin·i·dad and To·ba·go (trinidæd, təbéigou) a state in the lesser Antilles of the Commonwealth, composed of Trinidad (area 1,980 sq. miles, pop. 1,168,000) and Tobago (area 116 sq. miles) islands. Capital: Port-of-Spain. People: mainly African and East Indian, with mulatto, European, and Chinese minorities. The islands are mountainous and wooded. Main industries: oil extraction and refining, asphalt (both on Trinidad), agriculture (copra, cacao, sugar, fruit and vegetables, livestock raising), tourism. HISTORY Inhabited by Arawak and Carib Indians, Trinidad was visited and Tobago sighted by Columbus (1498). Trinidad was settled by the Spanish from 1532, but remained subject to raids by the Dutch and French until ceded to Britain (1802). Possession of Tobago was disputed between the Dutch and French (17th-18th cc.), and the island was ceded to Britain (1814). Trinidad and Tobago were amalgamated (1888). Jointly they became a member of the Federation of the West Indies (1958-62) and an independent state within the Commonwealth (Aug. 31, 1962), and a member of the Organization of American States (1967). Despite a prosperous tourist industry, unemployment remains high. The economic advantage held by the white minorities has increased black militancy, which erupted (1970) into widespread violence

Turner (tə́:rnər), Joseph Mallord William (1775-1851), English landscape painter. At first he worked exclusively in watercolor, but later he worked in oil as well. He began as an emulator of Claude's calm, static, visionary landscapes bathed in clear liquid light, but evolved steadily toward another vision, of the broken light and prismatic colors of an atmosphere which partly revealed, partly concealed the accidents of an actual scene. After Turner's first trip to Italy (1819) his works became remarkable for their color and luminosity and the swirling movement of his brushwork. Rushing wind, tossing water, broken and reflected light, a world of reflections and movement, a rainbow of pure colors: such things characterize his later art. He incorporated the iron ships, the trains and bridges of the industrial age, but they seem as visionary and phantasmal as all else in his universe. As a firm adherent of the direct vision in the open air, and as a keen analyst of the effects of light, Turner led to the French Impressionists

Twelfth Amendment (1804) an amendment to the U.S. Constitution reforming the method by which the Electoral College elects the president and vice-president. Under Article II, Section 1 of the Constitution, each elector was to cast a single ballot for both offices, not specifying a preference as to which of the two candidates was for which of the two offices. The candidate receiving the most votes would become president and the runner-up vice-president. The unforeseen formation of political parties, however, resulted in the electors' choosing (1796) a president and vice-president from different parties. In the 1800 election party-pledged electors were chosen. The casting of two ballots for the same ticket resulted in a tie between presidential candidate Thomas Jefferson, who was chosen by the House of Representatives, and his running-mate, Aaron Burr. The situation led to a call for reform and to the 12th Amendment. The amendment specifies: 1) separate ballots for each office, 2) whoever has the most votes (if a majority) for each office will be elected to that office, 3) if a majority is lacking, the House of Representatives will vote for the president [illegible] Senate will elect the vice-president from between the two highest candidates; 4) no person legally ineligible to be president can be vice-[illegible]

Twentieth Amendment (1933) an amendment to the U.S. Constitution providing for the orderly installation of the president, vice-president and members of Congress, shortening their 'lame duck' status, and clarifying the status of the president-elect and vice-president-elect with respect to presidential succession. The major provisions are: 1) the terms of the president and vice-president will end and new terms will begin on January 20 following an election, and members of Congress will end and begin their terms on January 3; 2) Congress will convene at least once a year, beginning on January 3 unless Congress selects another day; 3) if the president-elect dies, the vice-president-elect becomes president; or, if the president has not been chosen (under the Twelfth Amendment) or if the president-elect does not qualify, the vice-president-elect serves as president until the president-elect does qualify; or, if neither qualifies, Congress will declare how to appoint an acting president until a president or vice-president is qualified; 4) if Congress must choose a president or vice-president, Congress will also provide by law for the orderly succession to these offices in the event the designated person dies or is disqualified.

Twenty-fifth Amendment (1967) an amendment to the U.S. Constitution that provides procedures for fulfilling the duties of the presidency in the event of a president's death, resignation or removal as well as the prompt filling of a vice-presidential vacancy. The amendment's four provisions are: 1) in the event of removal, death or resignation of a president, the vice-president becomes president; 2) in the event of a vacancy in the vice-presidency, the president nominates a vice-president, who must be confirmed by a majority vote in both houses of Congress; 3) when a president declares an inability to serve in office, the president's duties will be assumed by the vice-president as acting president until the president declares his or her ability to resume them; 4) when the vice-president and either a majority of the heads of the executive departments or a specific congressionally determined body consider a president unable to fulfill his or her duties, the vice-president becomes acting president.

Twenty-first Amendment (1933) an amendment to the U.S. Constitution that repeals the 18th Amendment, which prohibited the manufacture of and trafficking in intoxicating liquors. The 21st Amendment thus became the first amendment adopted to repeal another amendment.

Twenty-fourth Amendment (1964) an amendment to the U.S. Constitution that forbids the requirement of poll taxes in federal elections and gives Congress the power to enforce the amendment. It states that in any presidential or congressional election, no citizen can be denied, by the state or federal government, the right to vote because of failure to pay a poll tax or any other tax. Although only 5 states (Alabama, Arkansas, Mississippi, Texas and Virginia) required payment of a poll tax as a prerequisite to vote, an amendment was needed to eliminate the practice [illegible] and [illegible] amendment [illegible].

amendment to the U.S. Constitution that limits the presidential tenure to two terms of office. It further states that if a vice-president succeeds to the presidency with 2 years or less of the former president's remaining term, the new president may be elected to 2 more terms; otherwise the new president may be elected to only 1 more term. The amendment was proposed by a Republican Congress in reaction to the 4-term presidency of Franklin D. Roosevelt, who broke the 2-term tradition begun by George Washington.

Twenty-sixth Amendment (1971) an amendment to the U.S. Constitution providing that citizens who are 18 years old or older may vote. This amendment is the 4th of the amendments to clarify voting rights (others are the 15th, 19th and 23rd). Its passage was occasioned by the massive protests in the 1960s by students and other young people against the Vietnam war and by their argument that 'if we're old enough to fight, we're old enough to vote.' The amendment reduced the voting age from 21 to 18.

Twenty-third Amendment (1961) an amendment to the U.S. Constitution granting the right of citizens in the District of Columbia to vote in presidential elections, a right denied since 1802, when the district was established. The amendment states that the number of electors, appointed by the district government, for president and vice-president cannot exceed those of the least-populous state—or 3 votes in the electoral college.

HISTORY (For previous [illegible] power (Nov. 7, 1917) under Lenin, the country was faced with a civil war (1918-21), in which anti-Communist forces unsuccessfully opposed the new regime, and a war with Poland (1920), in which Pilsudski unsuccessfully invaded the Ukraine. Lenin regained control (1921), but in the face of a severe economic crisis was forced to [illegible] U.S.S.R. was officially established (1922), and the 1924 constitution, based upon public ownership, put legislative power in the hands of the soviets, under the leadership of the Supreme Soviet [illegible] Stalin, resulting in the victory of Stalin. Le[illegible] the first five-year plan (1928), under which heavy industry was greatly expanded and a collectivization of agriculture was carried out. occupied (1940). The U.S.S.R. invaded Finland (1939) and annexed the Karelian Isthmus (1940). Germany invaded the U.S.S.R. (1941) and besieged Leningrad, but was repulsed from Moscow. The German attack on Stalingrad (1942-3) was one of the decisive battles of the 2nd world war. The Russian counteroffensive (1943-5) drove the Germans back through E. Europe, reaching Berlin (1945). The U.S.S.R. declared war on Japan (1945) and rapidly conquered much of Manchuria and Korea. It took part in the conferences at Tehran (1943), Yalta (1945) and Potsdam (1945), joined the U.N. (1945) and emerged as a major world power. The Russian policy of Communist expansion, abandoned officially (1943) with the dissolution of the Comintern, was resumed (1947) with the establishment of the Cominform. Nonaggression and mutual assistance pacts were made with the neighboring countries of E. Europe, which now became people's republics. Relations between the U.S.S.R. and the West deteriorated in the cold war, and worsened further with the outbreak of the Korean War (1950-3). After Stalin's death (1953), the regime showed more liberal tendencies. The post of prime minister was held by Malenkov (1953-5), Bulganin (1955-8), Khrushchev (1958-64) and Kosygin (1964-80). Soviet economic planning placed more emphasis on consumer goods, in a seven-year plan (1959-65) which was incorporated (1960) in a 20-year plan. Khrushchev's government found increasing difficulty in increasing agricultural output at the desired rate. The U.S.S.R. launched the first artificial satellite into space (1957), sent the first rocket to the moon (1959), sent the first man into space (1961), landed the first probe on the moon (1966) and landed the first probe on Venus (1967). Tension with the West was maintained over the question of German reunification, the building of the Berlin wall (1961), the Cuba crisis (1962) and the war in Vietnam (1964-75). Ideological disagreements with China appeared (1959), and the rift widened progressively, involving other Communist countries. Relations with European socialist countries were marked by difficulties with Rumania and, esp., by the intervention (1968) of Warsaw Pact troops in Czechoslovakia to end the liberalization of the regime. Khrushchev was ousted from power in 1964 by a group led by Leonid Brezhnev, who pursued a policy of détente with the West. In 1982 leadership passed to Yuri Andropov, who died two years later, and then to Konstantin Chernenko, who died in 1985. Mikhail Gorbachev assumed power in 1985.

Union Pacific Railroad the first transcontinental railroad in the U.S.A., chartered (1862) by Congress. The Union Pacific joined (1869) the Central Pacific near Ogden, Utah, and a golden spike marks the juncture. The railroad was involved in the Credit Mobilier of America scandal. Greatly expanded under the direction of Edward H. Harriman, it lost (1904-13) its monopolistic control through the action of the U.S. Supreme Court.

United Arab Emirates (formerly Trucial States) seven Arab sheikhdoms (total area approx. 32,000 sq. miles, pop. 1,121,800) on the Persian Gulf coast of Arabia between Qatar and the Musandam peninsula (formerly known as the Pirate Coast): Abu Dhabi, Dubai, Sharjah and Kalba, Ajman, Umm al Qaiwain, Ras al Khaimah, Fujairah. Capital, chief town and port: Abu Dhabi (pop. 243,000), in Abu Dhabi. The land is flat desert, except for mountains on the east (Gulf of Oman) coast, rising to 4,000 ft. Main export: petroleum (esp. from Abu Dhabi). Other products: fish, vegetables, dates, pearls. Monetary unit: the Bahrain dinar in Abu Dhabi, elsewhere the Saudi rial (100 paise). HISTORY. The sheikhdoms, Moslem since the 7th c., entered into a series of treaties with Britain (1820, 1853 and 1892), suppressing piracy and slavery and establishing British protection. Independence was declared in Dec. 1971. A flood of foreign workers came into the country because of the oil boom; almost half the population is South Asian. The native Arabs are nearly all Moslems. Authority remains with the seven hereditary sheiks, who choose a president from among themselves. Since 1971 Zaid bin Sultan al-Nahayan of Abu Dhabi has been president.

United Arab Republic a union (1958-61) of Egypt and Syria. Yemen entered Feb. 1958 (as a federal unit), with the United Arab Republic. Syria seceded (1961) and the union was dissolved, but Egypt maintained the name as its official title until 1971. Attempts were made to revive the union with the addition of Iraq (1963), and to form a common market with Iraq, Kuawit and Jordan (1964).

United States of America (*abbr.* U.S.A., USA) a federal republic (area 13,618,770 sq. miles, pop. 231,534,000) in North America, incl. Hawaii and Alaska. Capital: Washington. Largest city: New York. Overseas territories: Puerto Rico, Virgin Is., American Samoa, Guam, Wake and Midway. The U.S.A. also controls the Trust Territory of the Pacific Islands (the Caroline Is., Marshall Is. and Marianas Is.). People: white, Afro-American and mulatto, small American Indian, Japanese, Chinese, Southeast Asian and Filipino minorities. Language: English, minority and immigrant languages. Religion: 51% Protestant (30 principal denominations), 22% Roman Catholic, 3% Jewish, 2% Orthodox. The land (excluding

Hawaii and Alaska (2% forest, 3% pasture and 24% arable). Main industrial zone: the Great Lakes-North Atlantic coast region. The Atlantic coast is greatly indented. The cultivated (increasingly industrialized) coastal plain, narrow between Maine and Cape Cod, widens toward the Gulf of Mexico to merge with the lower Mississippi basin and E. Texas plains. Behind it the wooded Appalachian system stretches from New England to central Alabama, incl. wide fertile valleys between [illegible] York State and Tennessee, and poor, eroded hills in Kentucky and West Virginia. The Mississippi-Missouri basin (cereals, cotton, petroleum) stretches from the Gulf of Mexico to the Great Lakes, broken only by the Ozarks and by the lower Canadian Shield around Lake Superior. West of it to the Rockies (Mt Elbert, 14,431 ft) lie the Great Plains (cereals, grazing land), rising to 5,000 ft in the west. Between the Rockies (*ROCKY MTNS) and the Cascade (Mt Rainier, 14,410 ft) and Sierra Nevada (Mt. Whitney, 14,495 ft) ranges lies an arid plateau region (mining, cattle raising, cereals) divided into the Columbia and Colorado plateaus and the Great Basin, with a large desert in S. Nevada, S.E. California and W. Arizona. Fertile valleys in Washington, most of Oregon, and central California and desert valleys elsewhere separate the Cascades and Sierra Nevada from the wooded coast ranges (1,000-5,000 ft). The Pacific coast has few harbors. Average temperatures (F.) in Jan. and July: New York City 32°-75°, Chicago 26°-74°, Nashville 39°-79°, New Orleans 54°-80°, Denver 30°-71°, S.W. Arizona 55°-91°, Los Angeles 52°-71°, Seattle 39°-63°. There are over 300 universities, the oldest being Harvard (1636). Chief ports: New York City, Philadelphia, Baltimore, New Orleans, San [illegible]. Main fishing ports: Boston, Portland (Maine), Monterey, Los Angeles. Monetary unit: U.S. dollar (100 cents). HISTORY. The North American continent is thought to have been discovered (c. 1000 A.D.) by Vikings under Leif Ericson, but the existence of the New World was not known for certain in Europe until the voyage (1492) of Columbus. There were probably about 1,500,000 American Indians at this time in what is now the U.S.A. Spain began to colonize Florida (1565) and extended its control over much of Texas and the West. France explored from the Great Lakes, down the Mississippi, to Louisiana. After Sir Walter Raleigh had failed in his attempt to found a colony in Virginia (1584-9), the first permanent English settlement in North America was established there (1607) by a chartered company. Effective colonization in New England began when the Pilgrim Fathers settled at Plymouth (1620). Massachusetts Bay was founded (1628) by a chartered company. The Puritans of Massachusetts founded Connecticut (1635) and Rhode Island (1636). The Dutch founded a colony along the Hudson and the Delaware (1620s), which was conquered by the English (1664), together with a former Swedish colony [illegible] and taken by the Dutch (1655). Maryland was founded by English Roman Catholics (1634). The Carolinas were settled (1670) by a company chartered by Charles II. New Jersey was detached (1664) from the former Dutch colony now renamed New York, and was colonized by Quakers (1670s). Quakers also founded Pennsylvania (1682), granted by Charles II to Penn, who also received Delaware (1682). Georgia was founded (1733) as an English military post against French and Spanish rivalry and as a refuge for imprisoned debtors. Most of these Thirteen Colonies eventually passed to royal control. The colonies attracted increasing numbers of settlers from Europe, many of them fleeing from religious or political persecution, until by 1775 the population was over two and a half million. The economy was based on agriculture, notably in the Southern states, where tobacco and cotton plantations were worked by imported African slaves. The Indians were driven back westward. Colonial and maritime rivalry with France led to King William's War (1689-97), Queen Anne's War (1701-13), King George's War (1745-8) and the French and Indian War (1754-63). The colonies increased their powers of self-government during these wars, and the British triumph in the Treaty of Paris (1763), by removing the French and Indian threat, lessened the colonies' dependence on Britain. British attempts to prevent westward migration (1763), to tax the colonies in accordance with mercantilist theory and to enforce the Navigation Acts caused widespread resentment. The Stamp Act was withdrawn (1766) but an attempt to allow the British East India Company a tax exemption to dispose of a tea surplus on the American market provoked the Boston Tea Party (1773). Britain retaliated with the Intolerable Acts (1774). The Revolutionary War broke out (1775-83), and the Thirteen Colonies adopted the Declaration of Independence (July 4, 1776). The colonies united as the U.S.A. under the Articles of Confederation (1781), superseded by the U.S. Constitution (1789), which gave the federal government greatly increased powers. Washington, the leader of the American colonies during the war, became the first president of the U.S.A. (1789-97) under the Constitution. Out of the disagreement between Hamilton and Jefferson as to states' rights arose a two-party system. In foreign policy, the Federalists tended to be pro-English and the Antifederalists pro-French. During Jefferson's administration (1801-9), the Louisiana Purchase (1803) greatly increased U.S. territory. As the frontier was pushed back westwards, the U.S.A. came into conflict with the British in the north, and the Spanish in the south. The invention (1793) of the cotton gin rapidly made cotton the dominant crop in the South, and encouraged the spread of plantations and slave labor. Maritime rivalry with Britain led to the War of 1812, after which the U.S.A. recognized Canada as a British possession, and obtained full access to the northwest. During Monroe's administration (1817-25), Florida was bought from Spain (1819), and the Monroe Doctrine was proclaimed (1823). As more settlers moved west and southwest, and new states were set up, a sharp division arose between states in which slavery was legal and those in which it was not. The issue was post[illegible]

The frontier made its mark on U.S. democracy [illegible] der whom the Democratic party took shape, the spoils system was developed and the nullification issue was raised. As a result of Jackson's financial measures, Van Buren had to face an economic crisis during his administration (1837-41). As the Industrial Revolution [illegible] its influence felt, communications and industry [illegible] had risen to 17,000,000. Settlement in Texas led the U.S.A. to annex it (1845), provoking the [illegible]

California gold rush (1849) raised the question of whether California should be a slave or free-soil state. The attempt to settle this by the Compromise of 1850 created more bitterness, which was increased by the Kansas-Nebraska Act (1854) and the Dred Scott Decision (1857). After Lincoln's election as president (1860) the Civil War broke out (1861-5). The Emancipation Proclamation abolished slavery (1863) and the war ended in victory for the North. In the Reconstruction period which followed, war damage in the South was slowly repaired and industrialization begun. Mineral wealth was exploited, industrial progress continued rapidly in the North and, at a time when speculation and business combinations were unchecked by legislation, vast fortunes were made by Rockefeller, Carnegie and Morgan among others. Labor began to organize. The West was fully opened up for mining, cattle ranching and grain production. The Indians were virtually confined to reservations. Settlement rapidly followed the building of railroads across the continent. Alaska was bought from Russia (1867). Hawaii was annexed (1898) and, after the Spanish-American War (1898), American influence was extended to Puerto Rico, Cuba and the Philippines. With the opening (1914) of the Panama Canal, the U.S.A. had become a major world power, with a population of 92,000,000. After McKinley's assassination, Theodore Roosevelt held the presidency (1901-9), attacking trusts and encouraging the conservation of national resources. Under his successor, Taft, the Republican party was weakened by the secession of the Progressive party, and Woodrow Wilson, a Democrat, became [illegible] lished the Federal Reserve System (1913) and carried out social reform. Wilson attempted to keep the U.S.A. neutral in the 1st world war, but the German use of unrestricted submarine warfare brought the U.S.A. into the war on the side of the Allies (1917). Wilson took a leading part in peace negotiations (1918) and in setting up the League of Nations, but the Senate refused to ratify the treaty. Apart from promoting the Kellogg-Briand Pact (1928), the U.S.A. adopted an isolationist foreign policy. Prohibition was in force (1919-33). National prosperity rapidly increased in a speculative boom during the administrations of Harding (1921-3) and Coolidge (1923-9). Hoover's administration (1929-33) faced the ensuing economic depression without great success. F.D. Roosevelt's New Deal was more successful. U.S. isolationism came to an end with Roosevelt's good neighbor policy toward Latin America. When the 2nd world war broke out, the U.S.A. remained neutral, but supplied lend-lease help to Britain (1941). After the Japanese attack on Pearl Harbor (1941), the U.S.A. declared war on the Axis (1941). Industry was organized for war production and a huge war effort was made. The U.S.A. developed the atomic bomb, and used it on Japan, bringing the war to a [illegible] aid to Europe under the Marshall Plan (1948-52) and, as the cold war developed, proposed the formation of NATO (1949). Truman's administration (1945-53) brought in a program of social reform. The U.S.A. gave massive support to South Korea in the Korean War (1950-3). Mc[illegible] communist sympathizers in government office [illegible] der Eisenhower (1953-61). His administration saw the end of the Korean War, and the formation (1954) of SEATO. Under the guidance of [illegible] capable of meeting any aggression by immediate retaliation. Technological rivalry with the U.S.S.R. gave rise to competition in the exploration of space, and the U.S.A. launched its first artificial satellite (1958). Alaska and Hawaii became states of the U.S.A. (1959). The ques[illegible] landing at the Bay of Pigs (Apr. 1961). The [illegible]

Lyndon B. Johnson, who gradually increased U.S. military support for South Vietnam, without achieving the military victory he sought. He intervened (Apr. 1965) in the Dominican Republic, reviving Latin American distrust of U.S. motives. Despite his unprecedented success in legislation, esp. in the field of civil rights and in his 'unconditional war on poverty', he decided (Apr. 1968) not to seek reelection. The eight-year Democratic run was ended by the election of Republican Richard Nixon, whose platform was based on an end to the war, the return to law and order, and the control of inflation. The first manned circumnavigation of the moon (Dec. 1968) and the first landing of a man (Neil Armstrong) on the moon (July 1969) enhanced U.S. prestige, somewhat offset by unprecedented disaffection in the U.S. academic community and esp. among youth over the continuing war and domestic racism. U.S. and South Vietnamese forces were sent (Apr. 1970) into Cambodia in search of North Vietnam's sanctuaries, and the operation aroused massive protest at home. U.S. land forces were withdrawn (by July 1, 1970) from Cambodia. President Nixon paid official visits (1972) to China and to the U.S.S.R. The Watergate crisis (1973-4) resulted in the resignations of several high government officials and culminated in the threat of impeachment and subsequent resignation of Pres. Nixon in Aug. 1974. Gerald Ford, who had replaced Spiro Agnew as vice president, served as president until 1977, when Democrat Jimmy Carter assumed office. Pres. Carter was instrumental in negotiating an Egyptian-Israeli peace treaty and the Panama Canal treaty; he also dealt with oil shortages, high inflation rates, and international crises caused by the Soviet invasion of Afghanistan and the taking of U.S. embassy personnel as hostages by Iranian students. The 1980 elections provided a landslide victory for Republican challenger Ronald Reagan, who survived an assassination attempt in 1981 and a serious recession early in his administration. A very large federal budget deficit continued to be a problem but unemployment and inflation rates dropped and Reagan was reelected in 1984 over opponent Walter Mondale. Civil strife in Central America, the growing budget deficit, tax reform, and long-term defense planning, esp. of the 'star wars' program, were among the chief issues of Reagan's second term.

Settlements were established by the Spanish (1624) and the Portuguese (1680). The Spanish drove the Portuguese out (18th c.). After a military revolt (1810-20) led by Artigas against Spanish rule, the Portuguese annexed Uruguay to Brazil (1820) but it again revolted (1825) and joined Argentina in war against Brazil. After British intervention, Uruguay was recognized as an independent republic (1828). It was weakened by civil war (1836-52), sporadic rebellions and war against Paraguay (1865-70). Great economic progress was made in the early 20th c. President Batlle y Ordóñez introduced (1903-7, 1911-15) a New Deal of radical social reform and dominated Uruguayan politics until his death in 1929. The vacuum he left, and the Depression of the early 1930s, allowed Gabriel Terra to establish (1933-8) a dictatorship. Despite fissions, Batlle's Colorado party retained power until it was ousted in the elections of 1958 by the opposition Blanco (Nationalist) party. During that time Uruguay developed its welfare state, joined (Feb. 15, 1945) the Allies in the 2nd world war, and became (1945) a member of the U.N. The presidency was replaced (1951) by a succession of Swiss-style National Council [illegible] drawn from the majority party and three from the minority, and operating by majority vote. Four members of the majority party took turns as the nation's nominal president. After the inauguration (1965) of Washington Beltran, the Blanco party leader, inflation was such (38% in 1965) that a referendum was held in the 1966 election. The [illegible] scrapped and Uruguay, in a new constitution reverted to government by a single chief executive. Gen. Oscar Gestido was elected president. Va·lé·ry (vælɛriː), Paul Ambroise (1871-1945), French poet and critic. He was strongly influenced by Mallarmé, and his poetry is in many ways a continuation of Mallarmé's work. It is extremely deliberate, though striving toward the status of magic or music, syntactically original, oblique, and calculatingly metaphorical. With Valéry art became so much a matter of deliberation that not surprisingly it became hard for him to write at all, and much of his art is 'about' the process of creating art. His poem 'le Cimetiere marin' (1922) rises to a moment of anguished directness, and awareness of the quality of being alive, and of being dead. His criticism sums up a whole French tradition of writing about the nature of art, and the relationships between the art-object, the artist and the world of experience

Ve·laz·quez (vəlæskiz, velúθkeθ), Diego Rodriguez de Silva y (1599-1660), Spanish painter. Philip IV was his patron and many of his finest portraits were of the royal family and the court, including dwarfs and jesters. Velazquez was early influenced by Caravaggio's 'realism' and chiaroscuro. A whole range of paintings is devoted to Spanish domestic life, in subtle color schemes of warm brown, gray and cream. They are pictures of acceptance, dignity and harmony. In contrast with them are the court portraits, where cardinal red and royal purple take the place of brown sackcloth, and the character of the noble sitter is rendered with sometimes terrifying perception. The speed and economy of Velazquez's brushwork, and his ability to capture surface and light with techniques which seem to disappear on close inspection, made him a powerful influence on French Impressionism

[illegible] 1,000 years, Vietnam achieved independence 939 A.D. The conflict between the Vietnamese monarchy and Catholic missionaries from Eu[illegible] region (1858-83). It was administered first as Annam, Chochin-China, and Tonkin, and later (after 1887) as part of French Indochina. After the Japanese occupation (1940-5), Vietnamese nationalists declared the country an independent republic (1945). Despite war (1946-54) the French were unable to regain control and ended with French defeat at Dien Bien Phu (1954). A Geneva conference (1954) divided the country at the 17th parallel into North and South Vietnam. Under the presidency of Ho Chi Minh, guerrilla troops from North Vietnam began in 1958 to invade South Vietnam and fierce fight[illegible] The U.S.A. steadily increased its military commitment in South Vietnam to a high (July 1969) of 550,000. Yet North Vietnam's Tet offensive (Feb. 1968), though costly to the North, disabused the American people of the hope of a military solution to the conflict. Discouraged by the growing anti-war movement at home, Johnson decided (Apr. 1968) not to seek reelection. Richard Nixon's electoral promise to end the war was based on three premises: success in the peace negotiations in Paris initiated by Johnson; success in the 'Vietnamization' program of steadily turning the military operations over to the South Vietnamese themselves, and a de-escalation of North Vietnamese and Viet Cong operations in South Vietnam. On Apr. 30, 1970, President Nixon announced an attack on the North's sanctuaries and arms stockpiles in Cambodia, by U.S. and South Vietnamese forces. The invasion was limited to 21.7 miles and U.S. forces were withdrawn by July 1, 1970. South Vietnamese forces remained in Cambodia and retained the support of U.S. air power. A new North Vietnamese offensive was launched (1972) in South Vietnam. U.S. troops were finally withdrawn in 1973 and two years later the South Vietnam government, under Nguyen Van Thieu, collapsed. The country was officially reunited on July 2, 1976, and has since developed closer ties with the Soviet Union, joining COMECON in 1978. Also in 1978, Vietnam invaded neighboring Cambodia (Kampuchea), managing the 1979 overthrow of the ruling regime and establishing a pro-Vietnamese government in its place. A guerrilla war continued between the two forces, however. China, allied with Cambodia, briefly invaded

Wag·ner (vɑgnər), Wilhelm Richard (1813-83), [illegible] early symphony (1832), a few marches and songs, and 'Siegfried Idyll' (1870), his fame rests on his operas. The earlier ones, culminating in 'Tannhauser' (1843-4) and 'Lohengrin' (1846-8), were followed by his masterpiece, the great 'Ring' cycle (NIBELUNGENLIED): 'Das Rheingold' (1869), 'Die Walkure' (1870), 'Siegfried' (1876) and 'Gotterdammerung' (1874). In most of his operas, including 'Die Meistersinger von Nurnberg' (1862-7) and 'Parsifal' (1877-82) he used Teutonic legend and history to serve a very personal mixture of feelings: a romantic association between love and death, a fusion between the erotic and the mystical, an ideal of heroism and nationalism. He believed strongly that opera must be a unified work of art, he wrote his own librettos and supervised every detail of production to achieve a carefully calculated impact on the beholder. His operas are structurally indivisible units. He used leitmotifs to identify his characters, or to allude to symbolic themes, and these leitmotifs could be transformed, blended, or carried on from one [illegible] cedure of his operas, esp. his continuous but varied melodic line and his orchestration and characteristic harmony, were new in European music. Through Mahler, Berg and Schonberg, Wagner leads to 20th-c. music.

Wales (weilz) a country (area, including Monmouthshire, 8,016 sq. miles, pop. 2,790,462) in the west of Great Britain. It is a division of the United Kingdom. Chief town: Cardiff. Language: English, Welsh (1% Welsh only, 25% bilingual). The land is 12% arable, 6% forest, largely pasture and grazing. Wales forms a rugged massif, partly covered with forest and moorland, with a lowland fringe widest along the English border and south coast. The massif is largely between 600 and 2,000 ft, rocky in the north and coal-bearing (esp. anthracite) in the south. It is highest in the northwest, rising to 3,560 ft (Snowdon). Average temperatures (F.): 42° (Jan.) and 60° (July). Rainfall: less than 50 ins in the lowlands, 50-80 ins in the moorland massif, well over 80 ins in the mountains. Chief ports: Cardiff, Swansea, Newport. The University of Wales is made up of colleges in Aberystwyth (1872), Bangor (1884), Cardiff (1883) and Swansea (1920). HISTORY Wales is thought to have been originally inhabited by Iberians and to have been overrun (c. 6th c. BC) by Celts. The Romans conquered the north and south (1st c. AD), but had little influence on most of the country. After the Roman withdrawal (early 5th c.), the Celts of Wales maintained their independence against the Anglo-Saxon invaders of England, challenging the authority of Offa of Mercia (8th c.). Wales was converted to Christianity (c. 6th c.) by Celtic missionaries, notably St David. William I of England, unable to subdue Wales, appointed earls to control the Welsh marches. The Welsh, notably under Llewelyn ap Iorwerth and Llewelyn ap Gruffydd, successfully opposed English attempts to invade until the late 13th c., when Edward I conquered the country, his son, the future Edward II, becoming prince of Wales (1301). Revolts against English rule continued, notably (1400-9) under Owen Glendower. The Tudors, a Welsh dynasty, fought in the Wars of the Roses as representatives of the Lancastrian claim, and one of them ascended (1485) the English throne as Henry VII. Under Henry VIII, Wales and the marches were brought into a legal union with England (1534-6). (For subsequent history, [illegible]

War of 1812 a war (1812-15) between Britain and the U.S.A. It arose from American resentment at the trade embargo imposed by France in the Continental System and by Britain in the orders-in-council of 1807 and 1809 during the Napoleonic Wars. Other causes were the British claim to search American ships for British deserters, and Anglo-American rivalry in the American northwest. During the war an American invasion of Canada failed (1812), a British force sacked Washington (1814), and several sea battles failed to produce a decisive result. New England remained hostile to the war. The war was settled by an agreement that both sides should give up territory captured, and appoint a commission to settle the Canadian boundary. After the signing of the treaty (Dec. 24, 1814) the British were defeated at New Orleans (Jan. 8, 1815). The war strengthened American nationalism and encouraged the growth of American industry

waste (weist) **1.** *n.* expenditure of goods, materials etc. without proportionate result, *a waste of fuel, a waste of time* ‖ needless and excessive consumption ‖ deterioration or decay by use, misuse or lack of use ‖ useless or damaged material produced during or left over from a manufacturing process ‖ a region naturally barren and desolate, or made so by man ‖ remnants of cotton fiber rejected during the process of manufacturing textiles and used to wipe machinery, absorb oil etc. ‖ superfluous matter, e.g. garbage, rubbish, ashes, human or animal excrement ‖ (*geog.*) the material resulting from land erosion, e.g. disintegrated rock, carried by streams to the sea **to go to waste** to be wasted, to become spoiled and useless **2.** *adj.* (of land) desolate, uncultivated, or made barren by natural catastrophe or man ‖ (of land) not able to be cultivated ‖ of or pertaining to refuse, *waste matter* ‖ serving to hold or convey refuse, *a waste bin* ‖ discarded as useless or in excess of requirements **to lay waste to** ravage [A.F. *waste*]

waste *pres. part.* **wast·ing** *past* and *past part.* **wast·ed** *v.t.* to consume or spend to no purpose, or excessively, *to waste effort* ‖ to enfeeble and emaciate ‖ (*rhet.*) to lay waste, to devastate **to waste away** to be in process of being used up ‖ to destroy ‖ to dwindle in health and vitality [A.F. *waster*]

waste·bas·ket (weistbæskit, weistbɑskit) *n.* a receptacle for wastepaper

waste·ful (wéistfəl) *adj.* (of a person) spending money, or using materials extravagantly ‖ showing such extravagance, *wasteful spending* **waste·ful of** causing the waste of

waste·land (weistlænd) *n.* a tract of desolate, uncultivated country ‖ a devastated area ‖ a period in life or history thought of as spiritually barren

waste·pa·per (wéistpeipər) *n.* paper thrown away as being no longer useful

waste·paper basket a wastebasket

waste pipe a pipe connecting with a sewer etc. to carry away bath water, sink water etc.

waste products refuse produced during or left over from a manufacturing process ‖ material, e.g. feces, excreted from a living human or animal body

wast·er (wéistər) *n.* a ruinously extravagant, self-centered person without moral strength

wast·rel (wéistrəl) *n.* (*old fash.*) a waster

watch (wɒtʃ) *n.* a small portable timepiece worked by a coiled spring, and designed to be worn on the wrist or carried in a pocket etc. ‖ (*naut.*) a period of time (usually 4 hours) during

on duty ‖ (*naut.*) that part of a ship's company on duty for a specified period ‖ (*naut.*) a sailor's period of duty ‖ a person or group of persons on duty, esp. at night, for purposes of guarding, protecting etc. ‖ (*hist.*) a guard, esp. a watchman or watchmen patrolling the streets at night ‖ (*hist.*) a division of the night (into three watches by the Jews and four watches by the Romans) **on the watch** on the lookout **to keep watch** to keep awake and alert for purposes of observing, discovering etc. ‖ (with 'over') to do this for the purpose of protecting or guarding [O.E. *wæcce*]

watch *v.t.* to observe (someone or something) attentively, *to watch someone's reaction* ‖ to be a spectator at, *to watch a play on television* ‖ to look after, *to watch sheep* ‖ to take a professional or private interest in, *to watch a patient's progress* ‖ to be careful about, pay attention to, *watch your manners* ‖ (*Br.*) to sit in on the trial of (a case) on behalf of a client who may be indirectly concerned ‖ *v.i.* to be closely observant, *to watch while an experiment is being performed* ‖ to stay awake, esp. at night, in order to attend a sick person, guard a prisoner etc. ‖ to be a spectator (as distinct from a participant) ‖ (with 'for') to keep a lookout, *watch for the postman* **to watch one's step** to act cautiously, proceed with care **to watch out** to keep a lookout ‖ to be careful **to watch over** to keep protective watch over (esp. a sick person) [fr. stem of O.E. *wacian*, to wake]

watch·case (wɒtʃkeis) *n.* the metal case enclosing the mechanism of a watch

Watch Committee (*Br.*) a special body of a county or borough council dealing with police discipline and matters of public order

watch crystal a cover of glass or plastic protecting the face of a watch

watch-dog (wɒtʃdɔg, wɒtʃdɒg) *n.* a dog kept to guard property

Watchdog Committee *n.* **1.** originally, a Congressional Intelligence Oversight Board created to oversee activities of CIA by Executive Officers **2.** by extension, any oversight committee

watch fire a fire lighted at night in a camp

watch·ful (wɒtʃfəl) *adj.* keenly observant or vigilant

watch glass (*Br.*) a crystal (cover of glass or plastic over the face of a watch)

watching brief (*Br.*) the brief of a barrister who watches a case for an indirectly concerned client

watch-mak·er (wɒtʃmeikər) *n.* a person who makes or repairs watches

watch-mak·ing (wɒtʃmeikiŋ) *n.* the business of making or repairing watches

watch·man (wɒtʃmən) *pl.* **watch·men** (wɒtʃmən) *n.* a guard, esp. of a large building at night

watch night a religious service lasting until after midnight on New Year's Eve (a practice begun by the Methodists in the 18th c.)

watch-tow·er (wɒtʃtauər) *n.* an observation tower from which a guard keeps lookout

watch-word (wɒtʃwɜːrd) *n.* a motto or slogan, esp. one used as a rallying cry

wa·ter (wɔtər, wɒtər) **1.** *n.* the transparent, colorless liquid, H_2O, which falls from the sky as rain, issues from the ground in springs, and composes three-quarters of the earth's surface in the form of seas, rivers, lakes etc. ‖ a body of this liquid ‖ this liquid with reference to its [illegible] the depth of this liquid, esp. with reference to displacement, *the boat draws 6 ft of water* ‖ a solution of some substance in this liquid, *ammonia water* ‖ any of various bodily fluids or secretions, e.g. tears, saliva, urine, amniotic fluid ‖ a shiny, wavy pattern imparted to some fabrics, e.g. silk, or some metals ‖ (*pl.*) natural mineral water ‖ (*jewelry*) the luster or transparency of a diamond or a pearl ‖ (*commerce*) nominal capital created by the issue of shares without a corresponding increase of paid-up capital or assets **by water** [illegible] **in deep water** [illegible] **in smooth water** [illegible] ing difficulties **of the first water** (of a diamond or pearl) of first quality ‖ (of a person in a specified category) of the finest quality, *a pianist of the first water* **on** (or **upon**) **the water** (of a person) on a ship at sea ‖ (of a ship) at sea **to keep one's head above water** to manage to stay out [illegible] to make one's mouth water to excite a strong desire in one by looking or [illegible] to make water [illegible]

(of a ship or boat) to leak or ship water **to take** (or **take in**) **water** (of a ship or boat) to leak or ship water **to throw** (or **dash** or **pour**) **cold water on** to take a discouraging attitude toward (a plan etc.) **2.** *v.i.* (of the eyes) to run or fill with tears ‖ (of the mouth) to fill with saliva ‖ (esp. of a ship) to take on a supply of water ‖ (of animals) to drink water, *the cattle water at the creek* ‖ *v.t.* to soak or wet with water, *to water a garden* | to give water to (an animal) to drink, *have the horses been watered?* ‖ to furnish (e.g. an army or a ship) with a supply of water ‖ to dilute by adding water to ‖ (*commerce*) to dilute (stock) by issuing shares uncovered by any increase of assets ‖ to impart a shiny, wavy pattern to (a fabric) by calendering ‖ (of a river etc.) to supply water to (land) ‖ to sprinkle (a road etc.) with water in order to lay dust **to water down** to dilute with or as if with water | to make (criticism) less forceful by adding remarks intended to mollify [O.E. *wæter*]

—Pure water is odorless, tasteless, transparent (although bluish in bulk) and relatively incompressible. It has a high specific heat and poor electrical conductivity. Under standard pressure it freezes (with slight expansion) to ice at 0°C, and boils at 100°C giving steam. The density is a maximum at 4°C, where it is taken as exactly 1 gm/cm^3. Water has the chemical composition H_2O, ionizing as $H_2O = H^+ + OH^-$. It is neutral, a good ionizing agent and a good solvent

water bear a tardigrade

water bed a bed whose mattress is a vinyl bag filled with water, sometimes temperature controlled

water beetle any of numerous aquatic beetles, esp. of fam. *Dytiscidae*, having fringed hind legs that function like oars

water bird a swimming or wading bird

water biscuit a thin hard biscuit usually made of flour and water

water boatman *pl.* **water boatmen** a hemipteran insect of fam. *Notonectidae*, living in still water. They move about the surface of water upside down, and are also good swimmers, propelling themselves with their long, thin, hairy hind legs

wa·ter·buck (wɔ́tərbʌk, wɔ́tərbʌk) *n.* any of various antelopes that live close to rivers and swim with ease, esp. either of two species of *kobus* of E. Africa [Du. *waterbok*]

water buffalo *pl.* **water buffalo, water buffaloes** *Bubalus bubalis* (or *Bos bubalis*), fam. *Bovidae*, the common domesticated Indian buffalo, used in most of the warm countries of Asia as a draft and milch animal

water butt a large open barrel for catching and storing rainwater

water cannon a large hose, usu. mounted on a [illegible] used to discharge pressurized water for [illegible]

[illegible] (*Br.*) a watering cart

water clock *Br.* a device for measuring time by the flow of a certain quantity of water

water closet (*abbr* W.C.) a toilet (plumbing fixture) or the room containing it

wa·ter·col·or, *Br.* **wa·ter·col·our** (wɔ́tərkʌlər, wɔ́tərkʌlər) *n.* paint in solid or semisolid form for which water, rather than oil, is the solvent | a picture executed with this paint ‖ the art of painting with this paint **wa·ter·col·or·ist**, *Br* **wa·ter·col·our·ist** *n*

wa·ter-cool (wɔ́tərku:l, wɔ́tərku:l) *v.t.* to cool (e.g. an engine) by means of circulating water

water cooler a device for dispensing cold drinking water in some public place

[illegible] (wɔ́tərkɔ:rs, wɔ́tərkours) *n.* a stream of water, e.g. a river or brook | the bed of such a stream, [illegible] a natural or artificial channel (e.g. a canal) for carrying water

[illegible] (wɔ́tərkræft, wɔ́tərkrʌft) *n.* ships, boats etc. collectively | skill in managing boats etc.

[illegible] *tium officinale*, fam. *Cruciferae*, a perennial cress living in running streams. Its pungent leaves are eaten as salad, cooked in soup etc

wa·ter·fall (wɔ́tərfɔl, wɔ́tərfɔl) *n.* a steep or perpendicular descent of a stream or river

water flea any of various small, active aquatic crustaceans of genera *Cyclops* and *Daphnia*

wa·ter-flood (wɔ́tərflʌd) *n.* a process for pumping steam or water into a seemingly depleted oil well to force out residual oil. —**waterflood** *v.*

Wa·ter·ford (wɔ́tərfərd, wɔ́tərfərd) a southern county (area 710 sq. miles, pop. 77,315) of Munster province, Irish Republic ‖ its county seat (pop. 31,968), a port

wa·ter·fowl (wɔ́tərfaul, wɔ́tərfaul) *pl.* **wa·ter·fowl** *n.* any bird that frequents rivers and lakes, esp. a swimming bird ‖ (*pl.*) swimming game birds

water fowling the hunting of water fowl — **water fowl** *v.* —**water fowler** *n.*

wa·ter·front (wɔ́tərfrʌnt, wɔ́tərfrʌnt) *n.* the land or land and buildings or a section of a town abutting on a body of water

water gage, *Br.* **water gauge** an instrument attached to a steam boiler etc. for indicating the height of water inside ‖ water pressure expressed as a height in inches

water gap a pass in mountains with a stream running through it

water gas a mixture of carbon monoxide and hydrogen, obtained by passing steam over or through glowing coke kept at a high temperature by intermittent blasts of hot air. It is used chiefly as a source of hydrogen and in the manufacture of liquid fuels

water gate a floodgate for controlling the flow of water ‖ a gate giving access from a property to a river etc.

water gauge *WATER GAGE

water glass a tube or box with a glass bottom for examining objects under water ‖ (*chem.*) a viscous solution of sodium or potassium silicate, used for preserving eggs and in the manufacture of soaps and detergents, and in industry as a protective cement

water hammer the loud thumping noise in a water pipe caused by an air pocket interrupting the flow of water or by the entrance of water into a steam pipe

water hen the European moorhen ‖ the American coot ‖ any of several Australian birds of the genus *Tribonyx*

water hole a cavity or depression where water gathers, esp. a pool in a dry river bed ‖ a hole in the surface of ice

water hyacinth *Eichhornia crassipes*, fam. *Pontederiaceae*, a tropical floating aquatic plant troublesome as a river weed, esp. in Florida

water ice a dessert of frozen water, sweetened and flavored with fruit juice

wa·ter·i·ness (wɔ́tərinis, wɔ́tərinis) *n.* the state or quality of being watery

watering can a metal or plastic container having a spout with (usually) a perforated nozzle, for watering plants

watering cart (*Am.—Br.* water cart) a tank on wheels carrying water or for sprinkling roads etc.

watering place a place where animals resort to drink ‖ a place where water can be obtained | (*old-fash.*) a resort for swimming, boating etc. | (*old-fash.*) a resort having mineral springs

water jacket a casing, through which water is circulated, surrounding a piece of machinery, esp. in the cooling system of many internal-combustion engines

water jump a water obstacle for a horse or runner in a steeplechase

water level the surface level of a body of water | the waterline of a ship ‖ an instrument for showing the level of a body of water

water lily *pl.* **water lilies** any of several aquatic plants of fam. *Nymphaeaceae*, having large floating leaves and white or brightly colored (esp. yellow) flowers, found in warm and tropical fresh water

wa·ter·line (wɔ́tərlain, wɔ́tərlain) *n.* any of various lines on a ship up to which she may be submerged in the water, esp. when fully loaded (*PLIMSOLL LINE) | (*papermaking*) a linear watermark ‖ the surface level of a body of water | the mark left e.g. on a building by water which has subsided

wa·ter-logged (wɔ́tərlɔgd, wɔ́tərlɔgd, wɔ́tərlɔgd, wɔ́tərlɔgd) *adj.* (of ground) soaked with water, saturated ‖ (of a ship or boat) so full of water that she hardly floats and can barely be managed | (of wood) so saturated with water that it has lost its buoyancy

Wa·ter·loo, Battle of (wɔ́tərlu:, wɔ́tərlu:) the final action (June 18, 1815) of the Napoleonic Wars, fought near the Belgian village of Waterloo. Napoleon was defeated by the British and Prussian armies under Wellington and Blucher

water main the main pipe in a water supply system

wa·ter·man (wɔ́tərmən, wɔ́tərmən) *pl.* **wa·ter·men** (wɔ́tərmən, wɔ́tərmən) *n.* a boatman, esp. one who makes a living by hiring out boats

wa·ter·mark (wɔ́tərmɑrk, wɔ́tərmɑrk) **1.** *n.* a mark showing the level to which water has risen or is expected to rise ‖ a faint translucent design impressed on certain kinds of paper at the moment of manufacture and visible only against the light, serving as a trademark or indication of type, size, category etc., and important in philately for the classification of stamps **2.** *v.t.* to stamp (paper) with a watermark ‖ to impress (a certain design) as a watermark

water meadow a meadow that is flooded at certain seasons

wa·ter·mel·on (wɔ́tərmelən, wɔ́tərmelən) *n.* *Citrullus vulgaris*, fam. *Cucurbitaceae*, a trailing vine native to tropical Africa but widely cultivated, esp. in warm climates ‖ its large round or elongated fruit, having a green or white rind and a pink, red or yellow, edible, very juicy, sweet pulp

water mill a mill powered by water

water moccasin *Agkistrodon piscivorus*, a pit viper of esp. the southern U.S.A. It is semi-aquatic and lives mainly in marshes and ditches

water nymph (*Gk* and *Rom. mythol.*) a goddess, e.g. a naiad, who lives in—or (in some cases) presides over—a body of water

water of constitution (*chem.*) water combined in a molecule in such a way that it cannot be expelled without destroying the unity of the entire molecule

water of crystallization (*chem.*) water of hydration found in many crystallized substances

water of hydration (*chem.*) water combined with some substance to form a hydrate. It can be expelled without fundamentally altering the composition of the substance

water on the brain hydrocephalus

water on the knee inflamed material exuded from the blood cells in the area of the knee joint following an injury to this part

water ouzel a member of *Cinclus*, fam. *Cinclidae*, a genus of birds related to the thrushes. They are able to walk on the bottom of streams in search of food

Water Pik a trademarked device designed to clean teeth by directing forceful streams of water onto and between teeth. *also* water toothpick, water pulse

water polo a game played in water by two teams of seven swimmers who pass a ball resembling a soccer ball to each other and try to throw it into the opponents' goal

wa·ter-pow·er (wɔ́tərpauər, wɔ́tərpauər) *n.* the energy of moving water converted into mechanical energy

wa·ter-proof (wɔ́tərpru:f, wɔ́tərpru:f) **1.** *adj.* that will not let water in or through **2.** *n.* (*Br.*) a waterproof garment, esp. a raincoat **3.** *v.t.* to make waterproof (e.g. by applying a silicone to a fabric)

water rail *Rallus aquaticus*, a European rail that lives in marshes

water rat a member of *Arvicola*, a genus of large aquatic voles ‖ a muskrat

water rate the charge for supply of water filtered, purified and piped to the consumer

wa·ter-re·pel·lent (wɔ́tərripelənt, wɔ́tərripelənt) *adj.* having a finish that minimizes absorption of water

water sail a sail set below a lower studding sail and close to the water, used when the breeze is extremely slight

water scorpion any of numerous aquatic insects of fam. *Nepidae*, having a long breathing tube extending from the abdomen

water seal a body of water in the bend of a pipe to prevent the passage of gas

wa·ter·shed (wɔ́tərʃed, wɔ́tərʃed) *n.* a ridge, or other line of separation, between two river systems or drainage areas | the catchment area of a river system

wa·ter·side (wɔ́tərsaid, wɔ́tərsaid) **1.** *n.* the land on the edge of a river, lake or sea **2.** *adj.* of or on the waterside ‖ living or employed on the waterside

wa·ter-ski (wɔ́tərski:, wɔ́tərski:) *v.i.* to skim across water on short, broad skis (water skis) while being towed by a motorboat

water snake a member of *Natrix*, a genus of harmless freshwater snakes widely distributed in eastern U.S.A

wa·ter-sol·u·ble (wɔ́tərsɔljub'l, wɔ́tərsɔljub'l) *adj.* (esp. of certain vitamins) soluble in water

water spider *Argyroneta aquatica*, a European aquatic spider that spins a balloon-shaped web beneath the surface of the water

wa·ter·spout (wɔ́tərspaut, wɒ́tərspaut) *n.* a pipe etc. for clearing water off a roof ‖ a column or spout of mist, spray and water caused by the meeting of a funnel-shaped cloud (extending from a heavy cumulonimbus cloud) and a mass of spray thrown up from the sea by a whirling wind. Waterspouts are most common in tropical or subtropical regions

water sprite a water nymph

water suit (*mil.*) a g-suit in which water is used in the interlining, automatically approximating the required hydrostatic pressure-gradient under G forces. *Cf* PRESSURE SUIT

water supply a system of storing water in reservoirs and piping it for use in houses, factories etc. ‖ the water thus stored

water table (*archit.*) a projecting, horizontal ledge set along the side of a wall for throwing off rainwater ‖ the surface below which the ground is saturated with water ‖ a gutter at the side of a road to take away water

wa·ter-tight (wɔ́tərtait, wɒ́tərtait) *adj.* constructed so as to be impermeable to water ‖ not liable to doubt, thoroughly sound, *a watertight alibi, a watertight project*

watertight compartment one of the compartments in a large ship, equipped with watertight doors or partitions which enable it to be sealed off completely in case of an emergency

water tower an elevated tank or reservoir into which water is pumped, thus furnishing a steady pressure to the system it feeds ‖ a fire-fighting apparatus capable of projecting water at a considerable height

water vapor, *Br.* **water vapour** water in the vapor state and below the critical temperature for water, in the earth's atmosphere (cf. STEAM)

wa·ter-way (wɔ́tərwei, wɒ́tərwei) *n.* a navigable channel, esp. a dredged river or canal ‖ a wooden channel hollowed out of thick planks along the edge of a ship's deck to drain away water into the scuppers ‖ a traffic route by water

wa·ter-wheel (wɔ́tərhwi:l, wɔ́tərwi:l, wɒ́tərhwi:l, wɒ́tərwi:l) *n.* a wheel rotated by the flow of water and used to work machinery, esp. in a mill ‖ a contrivance for raising water in buckets worked by a wheel

water wings inflated supports for a person learning to swim

wa·ter-works (wɔ́tərwə:rks, wɒ́tərwə:rks) *pl. n.* (usually construed as *sing.*) a system of reservoirs, mains, pumping stations etc. for the conservation and distribution of a water supply

wa·ter-y (wɔ́təri:, wɒ́təri:) *adj.* containing too much water, overdiluted, *watery soup* ‖ soggy, *watery cabbage* ‖ soaked in or running with liquid, moist, *watery eyes* ‖ suggesting rain, rainy looking, *a watery sky* ‖ (of color) washy, *a watery green* ‖ (of blisters, pustules etc.) exuding a liquid resembling water

Wat·kin Mtns (wɔ́tkin) mountains in S.E. Greenland containing the highest peak (12,200 ft) in the country

Wat·lings Island (wɒ́tliŋz) *SAN SALVADOR

WATS (*acronym*) for Wide Area Telecommunication Service (which see)

Wat·son (wɒ́tsən), James Dewey (1928–), U.S. biologist. He researched into the molecular structure of deoxyribonucleic acid (DNA). In 1962 he shared the Nobel prize for physiology or medicine

Watson, John Broadus (1878-1958), American psychologist. He originated the school of psychology known as behaviorism

Wat·son-Watt (wɒtsənwɒt), Sir Robert Alexander (1892-1973), Scottish physicist. His proposals for locating aircraft by radio-pulse echo detection led to the development of radar

Watt (wɒt), James (1736-1819), Scottish engineer who made (1765) fundamental improvements to the Newcomen steam engine, leading to the widespread use of steam power in mines, factories etc. In partnership with Matthew Boulton, Watt built many engines at their foundry in Birmingham. The unit of power is named after him

watt (wɒt) *n.* the mks unit of power, equal to 1 joule/sec (1/746 horsepower) [after James WATT]

watt-age (wɒ́tidʒ) *n.* amount of electrical power expressed in watts

Wat·teau (wætou, wɒtóu), Jean Antoine (1684-1721), French painter. His work expresses the 18th-c. ideal of courtly grace and elegance beneath which one discerns a keen intelligence and an underlying melancholy. His favorite scenes are leafy parks in which satin-clad aristocrats pay court in a shimmer of approaching twilight, and of country festivals in which burly peasants and robust working people wear the costumes and masks of the commedia dell' arte. Watteau was a superb draftsman (e.g. his chalk studies) and colorist

Wat·ter·son (wɒ́tərs'n), Henry (1840-1921), U.S. journalist and newspaper editor. With Walter N. Haldeman he became (1868) founding-editor of the Louisville Courier-Journal, one of the South's most influential newspapers. He was largely responsible for the nomination of Samuel J. Tilden as the Democratic candidate in the 1876 presidential election

watt-hour (wɒtauər) *n.* a unit of energy equivalent to the power of one watt operating for one hour, and equivalent to 3,600 joules

wat·tle (wɒt'l) **1.** *n.* a framework of interwoven sticks and twigs used to make walls, fences and roofs ‖ (*sing.* or *pl.*) rods and twigs so used, esp to support a thatched roof ‖ any of various trees and shrubs of the genus *Acacia* ‖ wattle bark **2.** *v.t. pres. part.* **wat·tling** *past* and *past part.* **wat·tled** to weave (twigs etc.) into wattle ‖ to make (walls etc.) of wattle ‖ to use (fence posts etc.) to make a barrier by interweaving flexible twigs and branches [O.E. *watul*]

wattle *n.* a wrinkled, usually brightly colored flap of skin hanging from the throat of some birds, e.g. the turkey, and some reptiles ‖ a barbel of a fish [origin unknown]

wattle bark the bark obtained from various Australian acacias and used in tanning

watt·me·ter (wɒtmi:tər) *n.* an instrument for measuring electrical power, esp. in watts

Watts (wɒts), Isaac (1674-1748) English hymn writer

Wa·tut·si (wɑtú:tsi:) *pl.* **Wa·tut·si, Wa·tut·sis** *n.* a tribe of tall, cattle-raising people inhabiting Burundi and Rwanda ‖ a member of this tribe

Waugh (wɔ), Evelyn (1903-66), British novelist. Hilarious satirical early novels include 'Decline and Fall' (1929) and 'Vile Bodies' (1930). Later works include 'Brideshead Revisited' (1944) and the war trilogy 'Men at Arms' (1952), 'Officers and Gentlemen' (1955) and 'Unconditional Surrender' (1961), brought together in 'The Sword of Honour'

wave (weiv) **1.** *n.* (*phys.*) an energy-bearing, self-propagating disturbance in a medium or in space, that may be in the form of an elastic displacement of the particles of the medium, or of a cyclical change in its temperature or pressure, or a variation in the electric, magnetic or electric potential field of space ‖ a wave form ‖ a forward-moving swell on the surface of a liquid (e.g. of the ocean). The particles that make it up have an oscillatory motion, perpendicular to the direction of its motion. Its size depends on its cause, e.g. the friction between the water and the wind ‖ something which has the shape of a wave, e.g. an undulation in hair or in a rippling flag ‖ a gesture of the hand or arm in a sweeping movement ‖ a sudden temporary surge of strong feeling, *a wave of disgust* ‖ a natural or social phenomenon resulting in a sudden increase, *a crime wave* ‖ a movement having the impetus of an ocean wave, e.g. an advance of soldiers or a great influx of migrating people or animals ‖ (*pl., rhet.*) the ocean **2.** *v. pres. part.* **wav·ing** *past* and *past part.* **waved** *v.t.* to cause to move to and fro with a motion resembling that of a wave, *to wave a handkerchief* ‖ to make a threatening gesture with, *he waved his fist in my face* ‖ to call, order, express etc. with a waving motion of the hand or arm, *to wave good-bye* ‖ to give the form of waves to, *to wave one's hair* ‖ *v.i.* to move to and fro or up and down with the motion of a wave ‖ to have the form of a wave or waves, *her hair waves naturally* ‖ to make a signal of farewell, welcome etc by moving something to and fro etc with a wavelike motion **to wave aside** to dismiss (objections etc.) airily [O.E. *wafian*]

wave band a range of radio frequencies within which a radio or television transmission is permitted

wave cloud a lens-shaped cloud indicating a high point in air motion, an important phenomenon in glider aeronautics

wave equation the fundamental equation of wave mechanics. It is a partial differential equation whose physically admissible solutions (wave functions) describe states in which the system may exist. These states possess certain characteristic values of energy and angular momentum (*QUANTUM NUMBER). The square of the modulus of the wave function is proportional to the probability that the particle may be found in a given region at any given time when it is in a state represented by that wave function

wave form (*phys.*) a curve that represents graphically the state of a wave-propagating medium at an instant in time or the condition at a single point in the medium during the passage of a disturbance. Wave forms are usually constructed on rectangular coordinates whose ordinates represent the values of the propagated variation, corresponding to distance or time of propagation on the other axis

wave front (*phys.*) the surface comprising at some given moment the positions just reached by the waves proceeding from a given source ‖ a surface that is the locus of all points of a wave producing equal distortion in a wave-propagating medium

wave function (*phys., abbr.* Q, ψ) a solution of the wave equation (*ORBITAL)

wave guide (*phys.*) a hollow metal conductor or cylindrical dielectric through which electromagnetic waves of length approx. 1 cm. (radar and television range) are transmitted with low energy loss by radiation and attenuation

wave·length (wéivleŋθ) *n.* (*phys.*, symbol λ) the distance, measured parallel to the path of propagation of a wave, between any point and the next successive point in phase at the same instant (e.g. the distance between successive points of maximum or minimum amplitude on the wave form)

wave·let (wéivlit) *n.* a tiny wave, a ripple ‖ (*phys.*) an elementary wave considered as a point source of a continuing disturbance

Wa·vell (wéivəl), Archibald Percival, 1st Earl Wavell (1883-1950), British field marshal. As commander in chief of the Middle East (1939-41) he distinguished himself in N. Africa. He was commander in chief in India (1941-3) and viceroy of India (1943-7)

wave mechanics a branch of quantum mechanics which represents the state of a physical system by means of an equation (*WAVE EQUATION) that attributes to the particle a wave character (*WAVE-PARTICLE DUALITY). This equation may be solved to provide meaningful values which accord with the wave character of the particle (*QUANTUM NUMBER), for the energy, momentum and position (e.g. an electron moving in the potential field of a nucleus). Such solutions are of an essentially statistical character, giving the probability that the particle will be in a given region at a given time rather than giving definite positions etc. Although wave-mechanics procedures lead in principle to exact solutions for any physical problem, these are of such great mathematical complexity that in practice only the simplest (2-body) systems (e.g. the hydrogen atom) can at present be solved exactly

wave motion (*phys.*) the motion of the particles of a medium in mechanically propagated waves (e.g. in water waves or sound waves)

wave number (*phys.*, used only of electromagnetic waves) the number of waves per centimeter of radiation of a given wavelength, being the reciprocal of the wavelength in centimeters (cf. FREQUENCY, cf. PERIOD)

wave-particle duality the concept in modern physics that associates a wavelength with a material particle, or a momentum of energy with a wave, in order to explain certain phenomena. Thus, electrons may be diffracted as if they were waves of wavelength $\lambda = h/mv$, where h is the Planck constant, m is the mass and v the velocity of the electron. Similarly electromagnetic radiation may behave as a beam of particles (e.g. photons in photoemission). It is found that electrons, photons, neutrons etc have the properties of both waves and particles, and it may be appropriate to employ either wave mechanics or particle mechanics in [illegible]

wa·ver (weivər) **1.** *v.i.* to hesitate between a choice of opinions or courses of action, *she wavered between going and staying* ‖ to begin to give way, to falter, *his confidence wavered under cross examination* ‖ to move about unsteadily, *a wavering flame* (of the voice or a

glance) to be unsteady **2.** *n.* a wavering [M.E *waveren* fr. *waven*, to wave]

wave theory a theory in physics that light is transmitted by a wave motion (cf. CORPUSCULAR THEORY, WAVE MECHANICS)

wave train (*phys.*) a uniform periodic wave of finite duration

wav·i·ly (weivili:) *adv.* in a wavy manner

wav·i·ness (weivinis) *n.* the state or quality of being wavy

wav·y (weivi:) *comp.* **wav·i·er** *superl.* **wav·i·est** *adj.* (of a line or surface) having a form consisting of a succession of many little waves moving back and forth in a wavelike way, *fields*

wax (wæks) **1.** *n.* any of numerous mixtures that differ from fats in being harder and less greasy and that are principally constituted from higher fatty acids in the form of esters, e.g. beeswax, carnauba wax ‖ cerumen ‖ any of various natural or synthetic substances resembling wax in physical or chemical properties or both, e.g. paraffin wax ‖ a resinous preparation used by shoemakers for rubbing thread ‖ sealing wax **2.** *v.t.* to apply wax to [O.E. *weax*]

wax *v.i.* (esp. of the moon) to increase in size and brilliance until full (cf. WANE) ‖ (*rhet.*) to grow, to become (as specified), *to wax eloquent* [O.E. *weaxan*]

wax bean any of various kidney beans having long, yellow edible pods

wax·ber·ry (wæksberi:) *pl.* **wax·ber·ries** *n.* the waxy fruit of the wax myrtle ‖ the snowberry

wax·bill (wæksbil) *n.* a member of *Estrilda*, fam. *Ploceidae*, a genus of small seed-eating birds, having bright bills resembling red, pink or white sealing wax, commonly kept as cage birds

waxed paper paper coated with white wax to make it waterproof and greaseproof

wax·en (wæksən) *adj.* resembling wax ‖ covered with wax ‖ made of wax

wax·i·ness (wæksinis) *n.* the state or quality of being waxy

wax insect any of various wax-secreting scale insects of fam. *Coccidae*, esp. *Ericerus pe-la*, a Chinese variety

wax myrtle any of various shrubs or trees of fam. *Myricaceae*, esp. *Myrica cerifera*, a shrub of eastern North America having aromatic foliage and small hard berries coated with a grayish-white wax that is used for making candles

wax palm *Ceroxylon andicolum*, a South American palm, the stem of which secretes a resinous wax ‖ the carnauba

wax paper paper coated with white wax to make it waterproof and greaseproof

wax·wing (wækswiŋ) *n.* a member of *Bombycilla*, fam. *Bombycillidae*, a genus of American and European passerine birds having a showy crest, brown, velvety plumage and secondary quills with tips resembling scarlet sealing wax

wax·work (wækswə:rk) *n.* a figure modeled in wax, usually representing a famous or notorious person, living or dead ‖ (*pl.*) an exhibition of

wax·y (wæksi:) *comp.* **wax·i·er** *superl.* **wax·i·est** *adj.* made of or resembling wax ‖ covered with or as if with wax ‖ (of tissue) affected with amy-

way (wei) *n.* the course taken, or to be taken, in getting from one place to another, or the ground traveled over in taking such a course, *the way to the beach is rocky, clear the way* ‖ the distance to be moved through in going from one place to another, *a long way to Rome* ‖ direction of movement, *come this way* ‖ (with 'in') an aspect, respect, *in some ways you are mistaken* ‖ a characteristic trait of behavior, *winning ways* ‖ (with 'with') the ability to please, *a way with girls* ‖ (with 'with') the ability to handle or manipulate, *a way with motors* ‖ the procedures etc. involved in an activity, *the way to tie a reef knot* ‖ (*naut.*) the motion or rate of progress of a vessel through water ‖ (*naut., pl.*) the wooden structure over which a ship moves when being launched ‖ (*pl.*) the parallel guides on the bed of a machine, e.g. a lathe, along which a carriage moves ‖ (*pop.*) one's physical, mental, moral or economic condition, *in a poor way* ‖ (*pop.*) a district, area, *down our way* **by the way** along or near the side of the road ‖ incidentally **by way of** by a route passing through, *to Hong Kong by way of the Suez Canal* ‖ (followed by a gerund) in the state of, *she is by way of being a fine actress* **each way** (*Br.*, of a bet) laid for a win or a place **in a way** despite certain reservations, *I like the work in a way* **in the family way** (*old-fash.*) pregnant **in the way of** in the course of **once in a way** (*Br.*) occasionally **on the** (or **its** etc.) **way** in transit, *the package is on the way* ‖ in the course of the journey, *it happened on the way to Quebec* **out of harm's way** stored away safely **the way of the world** the way people do behave (rather than the way they should behave) **to come one's way** to come into one's experience or possession **to feel one's way** to proceed with great caution **to gather way** (*naut.*) to increase in speed from being stationary, or nearly so, until the engines or sails control movement **to give way** to yield ‖ to break, collapse **to go one's own way** to act independently **to go on one's way** to resume a journey **to go out of one's way** to put oneself to some trouble, *he went out of his way to amuse the children* **to have it both ways** to benefit by each of two contrary possibilities **to have** (or **get**) **one's way** to do (or be allowed to do) what one wishes **to know one's way around** to be experienced enough to be able to protect one's interests or achieve one's purposes in circumstances where the ignorant would find it hard to do so **to lead the way** to go first and lead others **to make one's own way** to prosper by one's own resources **to make one's way** to advance, esp. in a leisurely manner **to pave the way for** to take the preliminary actions which will cause or permit (something) to happen **to pay its way** (esp. of a business) to be self-supporting **to pay one's own way** to meet one's own expenses **to see one's way clear** to feel that one can and should do something, *I can't see my way clear to taking that trip* **to stand in the way of** to be an obstacle to **under way** (*naut.*, of a ship or boat) making headway ‖ making progress [O.E. *weg*]

way *adv.* to a great degree, *way too deep* ‖ at a great distance, *way over there* [aphetic var. of AWAY]

way-bill (weibil) *n.* a document containing information as to the nature of a shipment of goods in transit and instructions for delivery

way-far·er (weifɛərər) *n.* (*rhet.*) a traveler, esp. on foot

way-far·ing (weifɛəriŋ) *adj.* (*rhet.*) traveling, esp. on foot

wayfaring tree *Viburnum lantana*, fam *Caprifoliaceae*, a Eurasian shrub related to the guelder rose, and bearing dense white flowers and black berries. It is frequently found growing along the roadside ‖ *V. alnifolium*, a North American shrub

way-lay (weilei) *pres. part.* **way-lay·ing** *past* and *past part.* **way-laid** (weileid) *v.t.* to wait for and attack in order to rob etc. ‖ to catch (someone) on his way somewhere in order to engage him in conversation

Wayne (wein), Anthony (1745-96), American general. He distinguished himself by his courage and daring tactics in the Revolutionary War

way-out (weiaut) *adj.* (*slang*) **1.** extreme **2.** unreal. *syn.* far-out

-ways *suffix* used to indicate direction, manner etc., as in 'sideways' [orig. gen. of WAY n.]

ways and means methods by which money can be raised or made available

way·side (weisaid) **1.** *n.* the side of a road etc. **2.** *adj* situated on, at or near the side of a road etc

way station (*Am.–Br.* halt) a minor stopping place without a siding or facilities for handling goods other than passengers' luggage

way train a local train

way·ward (weiwərd) *adj.* willfully turning away from what is right and proper, and heedless of the counsel of others, or showing willfulness and heedlessness [shortened fr. older *awayward*]

way·zgoose [illegible] (esp. an outing) of the employees in a printing establishment [etym. doubtful]

weak [illegible] *too weak to climb higher* ‖ lacking force, *a weak blow* ‖ able to resist only small strains, *a weak link* ‖ low in intensity, *weak sight* ‖ having a desired quality in only a slight degree, *a weak joke, weak tea* ‖ morally feeble, *weak will* ‖ ineffective in the use of authority, *a weak government* ‖ lacking logical or persuasive force, *a weak argument* ‖ deficient in mental power, *a weak mind* ‖ having or showing a lack of knowledge or skill, *weak in history, a weak set of answers* ‖ (of bodily organs) liable to collapse or not performing well, *a weak bladder* ‖ (*gram.*) of a verb which is inflected by adding a suffix to the stem, not by an internal vowel change ‖ (*gram.*) of Germanic nouns and adjectives inflected by the addition of a suffix formerly belonging to a stem in -n ‖ (*prosody*, of a verse ending) not stressed ‖ (*commerce*) tending toward lower prices, *a weak market* ‖ (*chem.*, of an acid or base) only slightly ionized in solution

weak·en *v.t.* to make weak ‖ *v.i.* to become weak [O.N. *veikr*]

weak-fish (wi:kfiʃ) *pl.* **weak-fish, weak-fish·es** *n.* a member of *Cynoscion*, fam. *Sciaenidae*, a genus of North American marine food fishes, esp. *C. regalis*

weak force (*particle phys.*) a force with a hypothetical quantum of W particle, that governs the interactions of neutrinos, modifies the forces of gravity and electromagnetism, and causes radioactive decay. **also** weak interaction. *Cf* STRONG FORCE

weak-kneed (wi:kni:d) *adj.* lacking moral resolution

weak·ling (wi:kliŋ) *n.* a physically weak person or animal ‖ a person without strength of character

weak·ly (wi:kli:) **1.** *comp.* **weak·li·er** *superl.* **weak·li·est** *adj.* delicate in health, lacking a strong constitution **2.** *adv.* in a weak manner

weak-mind·ed (wi:kmaindid) *adj.* lacking in resolution ‖ foolish ‖ indicating foolishness or lack of resolution

weak·ness (wi:knis) *n.* the state of being weak ‖ a defect ‖ a self-indulgent fondness, *a weakness for olives*

weal (wi:l) *n.* (*rhet.*) well-being [O.E. *wela*, wealth]

weal *n.* the stinging, red mark on the skin left by the lash of a whip etc. [var. of WALE]

Weald (wi:ld) a region of open country, formerly forested, lying between the chalk hills of the North and South Downs in Kent, Sussex, Surrey and Hampshire, England

wealth (welθ) *n.* abundant worldly possessions ‖ an abundance of possessions or an abundance of anything, *a wealth of illustrations* ‖ (*econ.*) the natural resources of a country, whether or not exploited ‖ (*econ.*) the products of the economic activity of a nation ‖ (*econ.*) anything which can be exchanged for money or barter **wealth·i·ly** *adv.* **wealth·i·ness** *n.* **wealth·y** *comp.* **wealth·i·er** *superl.* **wealth·i·est** *adj.* having an abundance of worldly possessions ‖ characterized by abundance [M.E. *welthe* perh. rel. to WEAL]

wean (wi:n) *v.t.* to train (an infant or young animal that has been suckled) to accept food other than its mother's milk, (with 'from') to induce (a person) to give up (undesirable associates or habits etc.) [O.E. *wenian*, to accustom]

wea·pon (wepən) *n.* any instrument used for fighting ‖ (*zool.*) any part used in attacking, fighting or defending, esp. the spur of a gamecock ‖ any means of attack or defense, e.g. tears, strike action, irony [O.E. *wǣpen*]

wear (wɛər) **1.** *v. pres. part.* **wear·ing** *past* **wore** (wɔ:r) *past part.* **worn** (wɔ:rn) *v.t.* to have (garments, ornaments) on the body, *to wear a coat, to wear a necklace* ‖ to have on one's person habitually, *to wear spectacles, to wear a beard* ‖ to arrange (one's hair, clothes etc.) in a specified way, *to wear one's hair short* ‖ to have (an expression) on the face, *to wear a smile* ‖ to diminish or impair by prolonged use, abrasion etc. ‖ to bring to a specified state by use, *to wear one's shirt to tatters* ‖ to make by scraping, rubbing, using etc., *to wear a hole in the carpet* ‖ (*naut.*, of a ship or boat) to fly (her flag) ‖ *v.i.* to diminish or deteriorate through use, friction etc. ‖ to resist damage or loss of quality by use etc., *material which wears well* ‖ to come to a specified state, *their hopes wore thin* **to wear down** to make or become worn ‖ to diminish the resistance of (a person) by nagging ‖ to exhaust (a person) **to wear off** to diminish gradually, *the effects of the ether wore off* **to wear on** (of a specified period) to undergo the passage of time, *the day wore on* **to wear out** to make or become unfit for further use as a result of being worn ‖ to exhaust (a person) **2.** *n.* a wearing by friction, abrasion etc. or being so worn ‖ damage due to

use ‖ the amount of such damage ‹the ability to resist damage due to use› ‹garments, ornaments etc worn on the body, *beach wear* ‖ O.E. *werian*]

wear *v.t.* (*naut.*) to bring (a ship) about by putting up the helm ‖ *v.i.* (*naut.*, of a ship) to come about by turning the stern to the wind [etym. doubtful]

wear-a-ble ‹wéərəbəl› *adj* able to be worn

wear and tear loss of quality due to use over a passage of time

wea-ri-ly (wíərilē) *adv* in a weary manner

wea-ri-ness (wíərinis) *n* the state or quality of being weary

wear-ing ‹wéəring› *adj* of or pertaining to clothing, *wearing apparel* ‖ very tiring, *a wearing day*

wea-ri-some ‹wíərisəm› *adj* causing physical or mental fatigue ‖ causing boredom

wea-ry (wíərē) **1.** *comp* **wea-ri-er** *superl* **wea-ri-est** *adj.* tired and dispirited ‖ at the end of one's patience ‖ causing or showing tiredness or dispiritedness, *weary work*, *a weary sigh* ‖ (with 'of') bored or tired, *weary of studying* **2.** *v pres part* **wea-ry-ing** *past* and *past part* **wea-ried** *v.t.* to cause to be weary ‖ *v.i.* to become weary [O.E. *wērig*]

wea-sel (wí:z'l) **1.** *n.* a member of *Mustela*, fam *Mustelidae*, a genus of small carnivorous mammals, native to almost all temperate and cold regions of the northern hemisphere. The weasel has a slender body, flattened head, long neck and short legs ‖ the fur or pelt of such an animal ‖ a tracked (land or amphibious) motor vehicle capable of going over snow or ice, traversing rivers etc. **2.** *v.i.* (*pop.*, esp with 'out') to get out of a bad situation, evade an obligation etc. in a cunning, equivocal manner [O.E. *wesule*]

weath-er (wéðər) **1.** *n.* the atmospheric conditions (heat, cold, wetness, dryness, clearness, cloudiness etc.) prevailing at a given place and time ‖ adverse atmospheric conditions, e.g. rain, sleet etc., *the weather kept us in* **to make good (bad) weather** (*naut.*, of a vessel) to behave well (badly) in bad weather **to make heavy weather of** (*Br*) to exaggerate the difficulty of (some task one is busy with) **under the weather** feeling slightly ill **2.** *v.t.* to expose (e.g. wood, stone) to changing atmospheric conditions ‖ to discolor, disintegrate, wear away etc. by such exposure, *the stone facing was badly weathered* ‖ to pass safely through a storm, a dangerous or difficult time etc., *to weather a crisis* ‖ (*naut.*) to get to the windward of (a cape etc.) ‖ to slope (e.g. a roof) so that it will shed rain ‖ *v.i.* to resist the bad effects of weather, *the paint has weathered well* ‖ to undergo some change, e.g. discoloration or disintegration due to exposure to the weather **3.** *adj* (*naut.*) windward, *the weather ocean*, to keep **one's weather eye open** to be on the lookout [O.E. *weder*]

weath-er-beat-en ‹wéðərbē'tən› *adj* showing permanent signs of exposure to weather ‖ roughened, hardened, sunburned etc., *a weather-beaten face*

weath-er-board (wéðərbərd, wéðərbourd) **1.** *n* a board adapted to shedding water easily by overlapping the one beneath ‖ (*naut.*) the windward side of a ship **2.** *v.t.* to equip with weatherboards **weath-er-board-ing** *n.* weatherboards collectively

weath-er-bound (wéðərbaund) *adj* (esp. of a ship) delayed or kept back by bad weather

weath-er-cock (wéðərkɔk) *n.* a flat device often shaped like a cock and free to pivot in the wind so as to show wind direction ‖ a person whose opinions and line of conduct change rapidly, according to what is fashionable or likely to be advantageous

weather gauge (*naut.*) the position of a sailing boat on the windward side of another, giving her an advantage in handling **to get the weather gauge of someone** to get an advantage over someone

weath-er-glass ‹wéðərglas› *n* a barometer

weath-er-ing ‹wéðəring› *n* the action of the weather over a long period on the appearance of exposed objects, esp. on the texture of weather on the earth's crust

weath-er-ly ‹wéðərlē› *adj* (*naut.*) making much lateral pressure (on the water) as to make little leeway

weath-er-man ‹wéðərman› (*pl* weather-men (wéðərmen) *n.* a person who forecasts or reports on weather conditions

Weatherman *n* member of the militant underground radical splinter group of Students for a Democratic Society. Weathermen (and Weatherwomen) advocated revolution and practiced frequent demonstrations most actively in the early 1970s. The group was named for a line in Bob Dylan's 'Subterranean Homesick Blues,' *You don't need a weatherman / to know which way the wind blows*

weather map a map showing the state of the weather conditions at a given time, and over an extended area, by indicating the temperatures, wind directions and wind forces, areas of low and high pressure, fronts etc

weather observatory ‹wéðərəbzə:vətəri› *n* an all-purpose machine that can simulate in a laboratory the effects of heavy dew, rain, sunlight, and thermal shock

weather-proof ‹wéðərpru:f› *adj* able to resist exposure to the weather without suffering serious damage **2.** *v.t.* to treat (a material) so as to make it thus

weather strip a strip of material used to cover cracks, joints etc so as to exclude rain or drafts

weather stripping a weather strip

weather vane ‹wéðərvein› *n* a weathercock

weave (wi:v) **1.** *v. pres part* **weav-ing** *past* **wove** (wouv) *past part* **wo-ven** (wouvən), **wove** *v.t.* to form (thread etc.) into a fabric by interlacing (the weft and warp) ‖ to make (a fabric) thus ‖ to make something by interlacing (rushes etc.) ‖ to make (something) thus ‖ to connect (a number of details, facts, ideas etc.) into a narrative, theory etc ‖ to construct (a narrative, plot, scheme etc.) thus ‖ to direct (a course) ‹*to weave a course through the crowd*› *v.i.* to engage in weaving ‖ to move this way and that in order to avoid obstacles, *to weave through traffic* **2.** *n* a manner or style of weaving, *a close weave* **weav-er** *n.* a person who weaves, esp. for a living ‖ a weaverbird ‖ (*basketball, lacrosse*) a series of movements in the form of an 8 involving several players to confuse opponents [O.E. *wefan*]

weav-er-bird (wí:vərbə:rd) *n* any of various members of *Ploceidae*, a family of Asiatic, East Indian and African birds resembling finches. Their elaborate nests are woven of grasses, reeds etc. and very often hang from the branches of trees

web (web) **1.** *n.* a piece of cloth in the process of being woven on a loom or just taken off the loom ‖ the fine network of threads spun by a spider or some other insects, e.g. the silkworm ‖ something intended to create mystery, entangle etc., *a web of conspiracy* ‖ (*biol.*) a tissue or membrane ‖ (*zool.*) a membrane uniting the digits of a bird, bat etc ‖ the vane of a feather ‖ a thin flat piece connecting the more solid parts in a girder etc ‖ the arm of a crank ‖ a large reel of paper used on a rotary press, esp. in printing newspapers **2.** *v.t. pres part* **web-bing** *past* and *past part* **webbed** to cover or join with or as if with a web ‖ to snare with or as if with a web [O.E. *webb*]

Webb (web), Sidney James, 1st Baron Passfield (1859-1947), English social historian and Fabian socialist. He and his wife Beatrice (1858-1943) published the minority report of the Poor Law Commission (1909), 'History of Trade Unionism' (1894), 'English Local Government' (1906-29), and 'Soviet Communism: a New Civilization' (1935)

webbed (webd) *adj* (e.g. of the feet of certain water birds) having the toes connected by a web or membrane

Web-be She-be-li (webeʃibeli) a river (700 miles long) flowing from south central Ethiopia across S. Somalia to the Juba

web-bing (webiŋ) *n* a strong, woven fabric in the form of a narrow strip used for straps, upholstery tapes etc ‖ (*Br., mil.*) a soldier's belt and equipment made mainly of hemp or jute fiber

We-ber (veibər), Carl Maria Friedrich Ernst von (1786-1826), German composer. His three operatic masterpieces are 'Der Freischütz' (1821), 'Euryanthe' (1823), and 'Oberon' (1826)

Weber, Max (1864-1920), German sociologist and economist. He was the first to view sociology as an empirical science. In 'The Protestant Ethic and the Spirit of Capitalism' (trans. 1930), he advanced the theory that there is a relationship between Protestantism, and the development of capitalism

Weber, Wilhelm Eduard (1804-91), German physicist who rationalized the system of electrical units by relating them to mass, length and time, and carried out researches in electricity and magnetism

we-ber (veibər, webər) *n* the mks unit of magnetic flux equal to 10^8 maxwells [after Wilhelm E. Weber]

We-bern (veibərn), Anton von (1883-1945), Austrian composer. He was a pupil of Schonberg (1904-8), and moved from early atonality to a later music in which there is no relation to tonal structure at all. His works include 'Five Pieces for Orchestra' (1911), songs, cantatas and string quartets

web-foot ‹webfut› *n* (*pl* **web-feet** ‹webfi:t›) (*zool*) a foot having digits joined by webs

web-foot-ed *adj* having digits joined thus

Webster (webstər), Daniel (1782-1852), American statesman, orator and lawyer. He supported the Union, and became a leader of the Whig party. He defended (1819) his alma mater in the Dartmouth College case. He took a strong stand against the Mexican War

Webster, John (c. 1580–c. 1625), English Jacobean dramatist. His tragedies 'The White Devil' (1612) and 'The Duchess of Malfi' (1623) are remarkable for their intense passion and their poetry

Webster, Noah (1758-1843), American lexicographer. His 'Compendious Dictionary of the English Language' (1806) preceded his crowning work, 'An American Dictionary of the English Language' (1828), revisions and abridgments of which have appeared from c. 1850 to the present day

Webster-Ashburton Treaty an Anglo-U.S. treaty (1842) negotiated in Washington, D.C. by Daniel Webster, the U.S. Secretary of State, and Lord Ashburton, the British representative. Western Sahara (formerly Spanish Sahara) an area (area 102,680 sq. miles) on the N.W. African coast, with important fisheries. Chief port: Villa Cisneros (pop. 2,000). Livestock: camels, sheep, goats. Spanish settlement began in the 15th c. The area was taken under Spanish protection (1884) and became a Spanish province (1958). After discovery of high-grade phosphate in Western Sahara (1963), Morocco and Mauritania pressured Spain to relinquish the area; Algeria and later Libya backed a pro-independence group called the Polisario Front. The World Court ruled (1975) that Western Sahara should be given self-determination. Morocco sent 350,000 civilians into the area and Spain withdrew (1976, ceding the northern two thirds to Morocco and the remainder to Mauritania. Mauritania signed a treaty with Polisario renouncing its claims (1979) and Morocco annexed the entire area. Refusing to negotiate directly with the Polisario, Morocco built a fortified wall around the northwestern corner of Western Sahara, which contained most of the population and mineral resources as well as the coastal fisheries. Drought drove many nomadic Saharans into towns behind the wall, where Moroccan investment and settlement, designed to gain local support, caused an economic boom. Libya halted aid to the Polisario when it signed a treaty of union with Morocco (1984)

Wilhelm I (vilhelm) (1797–1888), king of Prussia (1861–88), emperor of Germany (1871–88), second son of Frederick William III of Prussia. His plan to reorganize the army, in collaboration with van Roon, roused parliamentary opposition, and led to the appointment (1861) of Bismarck as prime minister. Wilhelm was proclaimed (1871) first Emperor of the Reich, and his reign saw the rise of Germany as a world power. Although often in disagreement with Bismarck, Wilhelm usually followed the latter's policy. Two attempts on Wilhelm's life (1878) were used by Bismarck as an excuse for antisocialist legislation

Wilhelm II (the 'Kaiser') (1859–1941), German emperor and king of Prussia (1888–1918), grandson of Wilhelm I of Germany. He succeeded his father Frederick III (1888) and forced Bismarck to resign (1890). He was the dominating force in the government from then on, trying to forestall socialism in Germany, and to pursue a weltpolitik abroad. His naval, commercial and colonial aspirations (BAGHDAD RAILWAY) drove Great Britain into the Entente Cordiale with France. His impetuousness, and the alliances he created, contributed largely to the 1st world war. After the war, naval mutiny and civilian revolt led to his flight to Holland (Nov. 10, 1918), where he died

Words·worth (wə:rdzwə:rθ), Dorothy (1771-1855), sister of William. She was a firm supporter and helpful critic of her brother. Her own place in literature is ensured by her 'Journals', published posthumously (1897)

Wordsworth, William (1770-1850), English poet. The 'Lyrical Ballads' (1798 and 1800), written jointly with Coleridge, are usually taken as the inauguration of English Romantic poetry. Wordsworth wrote most of the lyrics, 'Lines Written above Tintern Abbey' and other famous poems in this collection as well as the preface (1800 edition), in which he expounded his theories of poetry. In 1807 he published 'Poems in Two Volumes', containing 'The Happy Warrior', 'Ode to Duty' and the 'Immortality' ode. His later work could be said to be undistinguished. (his long autobiographical poem 'The Prelude', published in 1850, was in fact a revision of a version written many years earlier), but his genius often shone in a sonnet or [illegible] quatrain

One important aspect of Wordsworth's poetry and of his whole intellectual position is that he linked literary changes to intellectual changes generally. His feeling for external nature, his reflections on his own mysterious apprehensions of the 'otherness' of the universe and on his relations with it (did he create what he saw, or did he receive admonitions from some kind of universal spirit?): these led him to question the whole nature of perception, and with Coleridge to move away from the 18th-c. intellectual traditions inspired by Locke. The theorizing found expression as immediate and troubling perceptions which touch the reader still

He was important also for his personal history. He is the supreme example of that band of writers who welcomed the French Revolution as the great forward step toward social justice and human perfection. 'The Prelude' records (along with much else) the failure of his hopes, the despair to which it brought him, and his return to health and balance

Wordsworth is the preeminent rather than the representative Romantic, at his best he relates in language of mysterious simplicity the traffic of the individual soul with the whole framework of nature, the lasting force of childhood experience and, in adult life, 'the heavy and the weary weight of all this unintelligible world'. The verse of his great period seems to offer a way to acceptance, belonging and celebration which is entirely his own

World war, 1st the war (1914-18) between the Allies and the Central Powers. Its basic causes lay in the political, economic and colonial rivalries [illegible] Russian encouragement, presented a grave threat to the stability of Austria-Hungary. The Franco-Prussian War had left France aggrieved by the loss of Alsace-Lorraine. The imperialism of the late 19th c., backed by an armaments race based on the rapid growth of heavy industry, esp. in Germany, added to international tension. Finally, the spread of secret diplomacy and the formation of the Triple Alliance and the Triple Entente made it inevitable that when war began it would rapidly involve many countries. The Moroccan [illegible] Germany to the brink of war, and Austria's [illegible] Wars (1912-13) were a further manifestation of [illegible]

(June 28, 1914) of Archduke Franz Ferdinand at Sarajevo precipitated the 1st world war.

Austria, under the guidance of Berchtold, issued an unacceptable ultimatum to Serbia and declared war (July 28, 1914). Russia mobilized in support of Serbia (July 29). Germany declared war on Russia (Aug. 1) and on France (Aug. 3). Germany, applying the Schlieffen plan, immediately invaded Belgium. This violation of Belgian neutrality led Britain to declare war on Germany (Aug. 4). Austria declared war on Russia (Aug. 6). Germany and Austria were joined by Turkey (Oct. 30, 1914) and Bulgaria (Oct. 5, 1915). The Allies were joined, among others, by Japan (Aug. 23, 1914), Italy (May 23, 1915) and the U.S.A. (Apr. 6, [illegible]

The Germans advanced rapidly through Belgium and Luxembourg into N.E. France, forcing the French and a British expeditionary force to fall back toward Paris, with much hard fighting. The German failure to give sufficient weight to the right wing, as well as faults of communication between their armies and their [illegible] at the Marne (Sept. 6-13, 1914), driving the Germans back to the Aisne. Both sides, each trying to outflank the other, advanced toward the Channel ports, and the Allies stemmed the German advance at Ypres (Oct. 14-Nov. 13, 1914). Both sides dug in, and the line of battle became stabilized between Flanders and the Swiss border. It remained almost stationary here for the next three years, despite repeated attempts by each side to dislodge the other from its trenches and gain ground. The German use of poison gas at the 2nd Battle of Ypres (Apr. 22-May 2, 1915), the massive German onslaught at Verdun (Feb. 21-Dec. 15, 1916) and the British use of tanks at the Somme (July-Oct. 1916) all failed to break the stalemate in spite of over 2,000,000 casualties.

Meanwhile the Russian attack on E. Prussia was decisively crushed by the Germans at Tannenberg and the Masurian Lakes (Aug. 26-Sept. 15, 1914). By the end of 1915, the Germans had forced the Russians out of most of Poland. Repeated heavy defeats sapped Russian morale, the czar abdicated (Mar. 15, 1917), and the Bolshevik revolution was followed by armistice negotiations (Dec. 1917). By the time the Treaty of Brest-Litovsk was signed (Mar. 3, 1918), the Germans had overrun the Ukraine. In S. Europe, an Allied expedition to Gallipoli (Apr. 1915-Jan. 1916), with the aim of attacking Turkey and opening the Straits to help Russia, was a failure.

Italy, renouncing the Triple Alliance, remained neutral at the start of the war and then joined the Allies (May 1915). Italian and Austrian forces faced each other in stalemate in N. Italy until the Italians were routed (Oct.-24-Nov. 12, 1917). They counterattacked successfully, however, a year later. Serbia repulsed three Austrian attempts at invasion (Aug. 12-[illegible] German, Austrian and Bulgarian onslaught (Oct.-Nov. 1915). An Allied expedition to Salonica in support of Serbia was halted by the Bulgarians (Oct. 1915), but Bulgaria was forced to sue for an armistice (Sept. 1918). Russia [illegible] British troops advanced from the Persian Gulf north through Mesopotamia (1914-18). A Turkish attack on the Suez Canal was repulsed (Feb. 1915), and British, Australian and New Zealand troops defeated the Turks in Palestine and Iraq (1917-18). German colonies in Africa and the Pacific, and at Kiaochow, were captured by the Allies. Rumania was occupied (1917) by the [illegible]

At sea, the main battle was fought at Jutland (May 31, 1916), after which the German surface fleet remained in harbor for the rest of the war. The German use of unrestricted submarine warfare, in an attempt to starve Britain, had [illegible]

The arrival of the U.S. troops in Europe counliberated by Russia's withdrawal from the war. The Allies, now with a unified command under Foch, were able to halt renewed German offen[illegible] Belgian frontier. After Bulgaria had fallen to the Allies (Sept. 29, 1918), followed by Turkey (Oct. 30, 1918) and Austria (Nov. 3, 1918), Ger[illegible]

man morale collapsed. In the face of naval mutiny and republican revolts, Wilhelm II fled to Holland (Nov. 10, 1918) and an armistice was signed (Nov. 11, 1918) at Compiegne.

The war was ended by a series of treaties, including the Treaty of Versailles (June 28, 1919), the Treaty of St Germain (Sept. 10, 1919) and the Treaty of Lausanne (1923). The war had cost about 8,700,000 lives, including about 3,350,000 on the side of the Central Powers, and 1,390,000 French, 1,700,000 Russians, 780,000 British and 120,000 Americans. The 1st world war saw the development of trench warfare and submarine warfare, increased mechanization (esp. the use of tanks), and the use of aircraft, first for observation and later also for bombing. Out of the war settlement came the establishment of the League of Nations. But tensions were also created which were to give rise to the 2nd world war 20 years later

World war, 2nd the war (1939-45) between the Allies and the Axis. Its origins lay in German resentment at the terms of the Treaty of Versailles (1919), the economic crisis of 1929-30 which favored the rise to power of Fascist dictators, the failure of the League of Nations to gain international acceptance for disarmament, and the policy of colonial conquest adopted by Germany, Italy and Japan as a means of acquiring raw materials and markets. Germany, prepared for military conquest by Hitler, remilitarized the Rhineland (1936) in violation of the Locarno Pact. The League of Nations failed to react firmly either to this or to the conquest (1935-6) of Ethiopia by Italy under Mussolini. The Spanish Civil War (1936-9), in which German and Italian intervention assured the victory of Franco, served as a proving ground for new techniques of warfare. Britain and France, unprepared for war, remained passive when Germany annexed Austria (Mar. 1938), and they continued their policy of appeasement in the Munich Agreement (Sept. 1938), sacrificing the Sudetenland to Germany. The German seizure of the whole of Czechoslovakia (Mar. 1939) and the Italian seizure of Albania (Apr. 1939) put an end to appeasement. Germany signed a military alliance with Italy (May 1939) and a nonaggression pact with the U.S.S.R. (Aug. 1939). After manufacturing incidents over the status of Danzig and the Polish Corridor, Germany invaded Poland (Sept. 1, 1939). Britain and France declared war on Germany (Sept. 3, 1939)

Poland succumbed rapidly to the German 'Blitzkrieg' (lightning war), a technique of massive concerted ground and air attack. The U.S.S.R. joined with Germany in partitioning Poland and then crushed Finland (1939-40). The British and French armies remained immobile throughout the winter, relying on the Maginot line. Germany invaded Denmark (Apr. 9, 1940), which fell immediately, and Norway, which was conquered by June 9, 1940. The Netherlands were overrun (May 10-14, 1940), as well as Belgium (May 10-28, 1940) and Luxembourg (May 10, 1940). The Maginot line was turned by the Germans at Sedan (May 13, 1940). A rapid German advance through N.E. France trapped the Allied forces on the coast at Dunkerque, whence they were evacuated to Britain (May 26–June 4, 1940). Italy declared war in support of Germany (June 10, 1940). The French armies under Weygand were unable to stop the German advance on Paris (June 14, 1940). France signed an armistice (June 22, 1940) with Germany, providing for German occupation of the north of the country. The Vichy government under Petain was set up, while de Gaulle continued the struggle from London.

Britain, under the leadership of Churchill, defeated the German attempt to bomb it into submission in the Battle of Britain (Aug. 15, 1940–May 1941) and escaped invasion. In N. Africa, Italy invaded British Somaliland (Aug. 1940) and attempted to invade Egypt from Libya (Sept. 1940), but was checked by British forces. The British and Italian navies fought for control of the Mediterranean (1940-1), while German submarines attempted to cut off Britain's Atlantic supply routes. Greece re-

1940–Mar. 1941), but fell to a German and Bulgarian attack (Apr. 1941) which also crushed Yugoslavia (Apr. 1941) and Crete (May 1941). The Allies conquered Italian East Africa (Dec. 1940–May 1941), Iraq (May 1941) and Syria (July 1941). Germany, with Finnish, Hungarian and Rumanian support, attacked the U.S.S.R. (June 22, 1941) on a wide front and conquered most of European Russia by the winter of 1941, but halted west of Moscow. The U.S.A., while remaining neutral, agreed (1941) to supply lend-lease aid to Britain and the U.S.S.R. Churchill and Roosevelt drafted the Atlantic Charter (Aug. 1941). The U.S.A. was brought into the war (Dec. 8, 1941) by the Japanese attack on Pearl Harbor (Dec. 7, 1941). The Japanese rapidly overran the Philippines, Hong Kong, Malaya, Singapore, Burma, Indonesia and many of the Pacific islands, and were not checked by Allied naval and air victories until June 1942.

The war began to turn in the Allies' favor when the Axis forces under Rommel, sweeping back across N. Africa to Egypt, were routed by Montgomery's forces at Alamein (Oct. 1942). The U.S.A. landed troops in Algeria (Nov. 8, 1942) and, with British and Free French support, drove the Axis out of N. Africa by May 12, 1943. The Allies conquered Sicily (July-Aug. 1943) and advanced north up the mainland of Italy, which surrendered (Sept. 8, 1943), though German forces continued fighting in Italy. Meanwhile, the Russians, having successfully withstood a massive German offensive against Stalingrad (Sept. 1942-Feb. 1943), launched a counteroffensive which drove the Germans out of the U.S.S.R. by Aug. 1944. Underground movements in many German-occupied countries carried on successful guerrilla warfare and sabotage of German installations. The Poles rose in Warsaw (Aug. 1944). Allied counteroffensives gathered strength in New Guinea, the Pacific Is and Burma (1943-4).

The Allies had conferred together at Casablanca (Jan. 14-26, 1943), Quebec (Aug. 11-24, 1943) and Tehran (Nov. 28–Dec. 2, 1943), and had drawn up plans for the liberation of France. Under the command of Eisenhower, they invaded Normandy (June 6, 1944) and Provence (Aug. 15, 1944), and after much hard fighting drove the Germans out of France, liberating Paris on Aug. 25, 1944. Meanwhile the Russian offensive forced the surrender of Bulgaria (Sept. 11, 1944), Rumania (Sept. 12, 1944) and Finland (Sept. 19, 1944). Germany, fighting a rearguard action on all fronts, began to use rockets against Britain. The British landed in Greece (Oct. 1944), Belgrade was liberated by the Russians and the forces of Tito (Oct. 20, 1944) and the Germans withdrew from the Balkans. The Russians advanced through Poland, took E. Prussia and Czechoslovakia (Jan. 1945) and Vienna (Apr. 12, 1945), and overran E. Germany. The Allies crossed the Rhine (Mar. 7, 1945) and met Russian forces in Saxony (Apr. 25, 1945). As the Russians took Berlin (May 2, 1945), Hitler's suicide was reported. A German government formed by Doenitz surrendered unconditionally (May 7, 1945).

Meanwhile the British drove the Japanese from Burma (Feb. 1944–July 1945) and reestablished a supply route to China, which, by early 1945, had regained most of the territory lost to the Japanese. The Americans gradually expelled the Japanese from the scattered Pacific Is, the Philippines (1944-5), Okinawa (Apr. 1945) and Borneo (Aug. 1945). The U.S.S.R., having promised its support against Japan at Yalta (Feb. 4-12, 1945), invaded Manchuria. The U.S.A. dropped the first atomic bomb on Hiroshima (Aug. 6, 1945) and another on Nagasaki (Aug. 9, 1945), and Japan surrendered (Aug. 14, 1945).

The war, which cost more than 36 million lives, was the most destructive and widespread in history. Germany lost about 6 million lives, the U.S.S.R. about 17 million, Poland about 5,800,000, Yugoslavia about 1,600,000, Japan about 2 million, Italy about 450,000, Rumania about 460,000, France 570,000, the U.S.A. 400,000, Britain 400,000, Hungary about 430,000 and the Netherlands about 210,000. Millions were left homeless. Nazi Germany had attempted racial extermination, esp. of the Jews (of whom 6 million died), and had practiced atrocities in its concentration camps on a vast scale. Both the Allies and the Axis had increased their destructive power, culminating in the atomic bomb. After the war there emerged a new balance of power between the U.S.S.R., whose influence now spread throughout Eastern Europe, and the U.S.A. Germany was divided into zones of occupation, leading to the deeper division between East and West Germany and preventing the signing of a full peace treaty with Germany. Europe as a whole slowly recovered from economic exhaustion. The United Nations organization was set up (1945).

Peace treaties were signed between the Allies and Italy, Rumania, Bulgaria, Hungary and Finland in Paris (Feb. 1947), between the Allies (except for the U.S.S.R.) and Japan in San Francisco (Sept. 1951) and between the U.S.S.R. and Japan (1956), and between the Allies and Austria (May 1955), establishing Austrian independence

Yeats (jeits), William Butler (1865-1939), Irish poet His early poems (e.g. 'The Wind among the Reeds', 1899) sprang from late 19th-c. aestheticism, and were languorous and mannered But they were distinguished from other verse of the period by their use of Irish mythology, and this sense of belonging to the culture of his native land remained with him and was always a strength Two tendencies can be discovered in Yeats. The first was to elaborate a private mythology based on elements of spiritualism, classical lore, astrology and Eastern philosophy: the [illegible] poetry, and produced the rich, oblique, rhetorical, sounding verse e.g. of 'Byzantium'. The second was a movement toward a naked direct utterance, sinewy yet musical, with the simplicity of folk poetry In this mode he produced some of his most moving work, helped by his own sense of involvement in the Irish nationalist cause. Yeats was also a playwright, writing some fine verse plays on Irish mythological subjects for the Abbey Theater, Dublin

HISTORY. Yugoslavia was the name given (1929) to the kingdom formed (1918) by the union of Serbia, Bosnia-Herzegovina, Croatia, Macedonia, Montenegro and Slovenia. Such a union had been urged in the late 19th c. by the supporters of Pan-Slavism, and became possible when Austria-Hungary collapsed in the [illegible] world war. Alexander I, regent 1918-21 and king (1921-34), failed to reconcile the various nationalities and was assassinated by Croat nationalists. The regency in the name of Peter II followed an increasingly pro-Axis policy until overthrown (1941) in a coup d'etat. Yugoslavia was occupied 10 days later by the Germans. Among several guerrilla resistance groups, a Communist group led by Tito received Allied support and controlled most of the country by the end of the 2nd world war. Yugoslavia was proclaimed a federal people's republic (1945) with Tito as head of state, and all means of production and natural resources were nationalized. It was a leading member of the Cominform until 1948, when it broke off relations with the U.S.S.R. Yugoslavia thereafter adopted an independent communist policy. The government was decentralized and collectivization of industry and agriculture was reduced. Yugoslavia's dispute with Italy over Trieste was settled (1954). Normal relations with the U.S.S.R. were resumed after 1955. The country was proclaimed a socialist federal republic (1963). The presidency became (1971) a collective presidency, with Tito at its head. After Tito's death (1980) his policies of nonalignment and decentralized economic management were continued. An austerity program was begun to reduce inflation and the country's large foreign debt.

THE PRESIDENCY

In the course of some 200 years, the presidency of the United States has become the most powerful office in the world. The duties and responsibilities of the office are immense. Unlike many of the democratic governments of Europe and elsewhere that have both a chief of state and a head of government, the U.S. system of government has only one chief executive, the president. The holder of that office serves not only as head of government but also in the primarily ceremonial post of chief of state. As chief of state, the president performs many of the public and ceremonial duties undertaken by the king or queen of the United Kingdom, other monarchs, and the governor-general of Canada and other Commonwealth nations. Although some of the duties the president performs as chief of state may seem trivial, the role helps the occupant of the office maintain contact with the overall populace. As head of government, the president is the chief executive of the nation, the director of the government. In addition the president serves as commander in chief of the armed forces of the United States and the voice of the American people.

According to presidential scholar Clinton Rossiter, the presidency is a one person job. The person "who holds it can never escape making the final decisions in each of many areas in which the American people and their constitution hold "him or her responsible." A sign on the presidential desk of Harry S. Truman, the nation's chief executive from April 1945 to January 1953, said it perfectly: "The buck stops here." According to Rossiter, "that, in the end, is the essence of the presidency. It is the one office in all of the land whose occupant is forbidden to pass the buck." Recognizing the value of President Truman's words, a White House successor of entirely different political persuasion adopted the motto for his administration 28 years later.

George Washington took the presidential oath in New York on April 30, 1789. The 20th amendment set the inauguration date as January 20

The Role and Duties of the President

The role of the president has expanded considerably beyond that envisaged by the Founding Fathers in the Constitution. During such crises as the Civil War, world wars I and II, and the depression of the 1930s, Congress and the nation both turned to the executive for leadership and guidance. Crisis powers given to the president were to a great extent retained afterward, thereby adding new stature to the office. Likewise, as foreign affairs increased in importance during the 20th century, the president's role as the voice of the nation added new prestige and responsibilities to the office. Governmental efforts to provide for the social and economic welfare of its citizens, initiated in the depression of 1929-33 and subsequently expanded, have contributed to the president's duties and powers in the economic and social spheres. Likewise, the necessity for an expanded bureaucracy serving the president has heightened his prestige and influence at the expense of the legislative branch.

Such figures as Thomas Jefferson, Andrew Jackson, Abraham Lincoln, Theodore Roosevelt, Woodrow Wilson, Franklin D. Roosevelt, and Harry S. Truman have shaped the presidency. Normally regarded as "strong presidents," these individuals, exercising their prerogatives as leaders of the nation, utilized their influence to initiate major changes in American society. In so doing they added to the magnitude of the office. Although the Vietnam war and the Watergate scandal of Richard Nixon's administration strained the presidency during the 1960s and early 1970s, President Gerald Ford and his successors worked hard, and successfully, to restore the office to its former status.

The President as Leader of the Nation. The president as leader of the nation is confronted with a multiplicity of problems and tasks. As the only executive official elected by the people at large (the vice-president is assigned a legislative post as president of the Senate), he represents the nation to the world. His responsibilities do not stop there, for he is the chief policymaker for domestic and foreign affairs. In this capacity, although he is acknowledged as the leader of one of the political parties, he must represent all the

John Marshall, who was to become chief justice of the United States, recognized, as secretary of state, the inherent responsibilities of the president in the domain of foreign affairs. "The president," he noted in 1799, "is the sole organ of the nation in its external relations, and its sole representative with foreign nations." In receiving the credentials of foreign delegates the president exercises the prerogative of recognizing or rejecting the credentials of other governments. Likewise, he has the power to withdraw such recognition. He alone may address foreign governments or be addressed by them. Diplomatic communications are generally carried out through the numerous ministers and envoys who represent the president and the United States in other countries.

The president, with the advice and consent of the Senate, consummates treaties in his capacity as leader of the nation. (He signs treaties as chief of state.) Should he ignore the Senate's role in treaty making, especially by disregarding the Senate in the making of a pact, the president may endanger his own position. Thus President Wilson, by ignoring the senators in the negotiations on the Treaty of Versailles and the League of Nations, created acrimonious feelings that later led to the rejection by the United States of the treaty and the league. In addition to this, the president must recognize the need for congressional appropriations for his foreign policy measures. Consequently he must cultivate congressional support for his programs.

As leader of the nation, the president must determine the course of foreign and domestic policy. The Constitution stipulates that the executive "shall from time to time give to the Congress Information of the State of the Union, and recommend to their Consideration such Measures as he shall judge necessary and expedient." In his messages to Congress, including those on the annual budget, the state of the union, and the economic condition of the nation, the president suggests the programs and measures for legislative enactment that he considers vital to the nation's welfare and betterment.

Elected by the people, the president, unlike members of Congress, represents the entire nation rather than a district or state. Hence he must be a national leader. This he accomplishes by diverse means. In addition to his messages to Congress, he utilizes television and radio, including the live televised address and press conference, to inform the people of his position concerning the issues and problems confronting the nation.

Although elected specifically as a member of one political party, the president must work with both parties in determining public policy. Nevertheless, as the nominee of a specific party, he must also work toward the realization of that party's programs and goals. To prevent a complete cleavage in society, however, the president, along with the leaders of his party and the opposition, often works out programs on crucial matters like foreign affairs and national defense that are generally acceptable to both parties. If the president's party holds a majority in Congress that is in accord with his views, the president is more likely to see his program enacted. However, if his party is in a minority, or if the members of his own party disagree with his specific programs, the president's legislative measures may be ignored or defeated by Congress.

Early in 1986, President Ronald Reagan urged a major U.S. arms sale to Saudi Arabia. The Republican-controlled Senate and the Democratic-controlled House of Representatives passed a resolution blocking the sale. The president then vetoed the resolution and began a major campaign to have his veto sustained. On the morning that the Senate was to vote on the measure, all 100 senators were invited to breakfast at the White House; many senators also received presidential telephone calls on the issue. Although the merits of the sale were considered during Senate debate, some supporters of the president's position simply pointed out that the "prestige of the presidency" was "at stake" with the vote. The veto was sustained in the Senate by one vote. Eight senators, who originally voted against the sale, voted to sustain the veto. The incident is a classical example of the political clout and power of the presidency.

The President as Commander in Chief. Article II, Section 2, of the Constitution states that the president is "Commander in Chief of the Army and Navy . . . and of the Militia of the several States, when called into the actual Service of the United States."

This provision assures civilian control of the military. Although this stipulation grants the executive broad powers, the chief executive is limited somewhat by those powers left solely to Congress. These powers include the right of Congress to declare war, to appropriate funds for the armed forces, and to conscript men for military service.

Nevertheless, the executive's powers are extensive. He selects the key figures in the military establishment, including the secretary of defense, the secretaries of the Army, Navy, and Air Force, and the military chiefs of staff. He recommends the defense budget to Congress and administers laws pertaining to the defense of the nation. He directs strategy in times of war, and is held responsible for the success or failure of the entire defense program. As noted previously, the president has often been delegated extraordinary wartime powers. These include the right to make decisions pertaining to the fundamental military strategy of the nation and, on the domestic scene, to initiate measures, including the invoking of martial law if necessary, designed to win a war. In fact, in the 175 years between the late 1790s and the early 1970s, U.S. troops had been sent into military hostilities some 200 times without a declaration of war. In the age of the Cold War and possible nuclear conflict, the case for congressional involvement in decisions involving military force seemed to be weaker than at any time in U.S. history. In the event of a nuclear attack against the United States, there very likely would not be time for a president to consult Congress.

The Vietnam war of the 1960s and early 1970s, which took some 57,000 American lives and cost the nation billions of dollars, marked a turning point. In 1964 the Congress, responding to an alleged attack on U.S. vessels in the Gulf of Tonkin off Vietnam, passed a resolution authorizing the president to take the steps needed, "including the use of armed force," to assist South Vietnam preserve its freedom. As the U.S. involvement in the conflict mounted, so did congressional discontent with the implications of the Tonkin Gulf Resolution. By the early 1970s, Congress was debating legislation to limit the president's war-making power. Finally in October 1973, the Senate and House of Representatives passed the War Powers Resolution. Although President Richard M. Nixon vetoed the measure, there was sufficient support in Congress to override the veto.

The purpose of the War Powers Resolution is stated in Section 2(a):

> to fulfill the intent of the framers of the Constitution of the United States and insure that the collective judgment of both the Congress and the president will apply to the introduction of United States armed forces into hostilities, or into situations where imminent involvement in hostilities is clearly indicated by the circumstances, and to the continued use of such forces in hostilities or in such situations.

The resolution requires the president to keep Congress informed both before and during any involvement by U.S. forces in hostilities. Under Section 4(a), the president is required to report to Congress within 48 hours when U.S. troops are introduced

> (1) into hostilities or into situations where imminent involvement in hostilities is clearly indicated by the circumstances;
> (2) into the territory, airspace or waters of a foreign nation, while equipped for combat, except for deployments which relate solely to supply, replacement, repair, or training of such forces, or
> (3) in numbers which substantially enlarge United States armed forces equipped for combat already located in a foreign nation.

A written report must be submitted to the speaker of the House of Representatives and the president pro tempore of the Senate setting forth:

> a. the circumstances necessitating the introduction of the United States armed forces;
> b. the constitutional and legislative authority under which such introduction took place, and
> c. the estimated scope and duration of the hostilities or involvement.

[illegible] in combat) is the length of the commitment limited by the resolution. In that event, Section 5(b) of the resolution requires the president to withdraw U.S. troops within 60 to 90 days unless the Congress authorizes their continued presence. The resolution also contains a provision, 5(c), permitting Congress, by concurrent resolution without approval by the president, to order the withdrawal [illegible]

Since passage of the act, Presidents Gerald Ford, Jimmy Carter, and Reagan sought ways to avoid the trigger mechanism in Section 5(b). The three presidents reported to the Congress under the act's provisions, but [illegible] which precise provision in the act applied to their deployment of forces. In this way they have been able to avoid the 60- to 90-day clock. As a result, the role of Congress in the deployment of U.S. troops abroad has not been any greater after enactment of the resolution than before.

The Presidency in History

Origins of the Office. The presidency, and what is often termed the "presidential system of government," is of distinctly American origin. Political philosophers such as John Locke (1632-1704) and Baron de Montesquieu (1689-1755) had written earlier on the separation of legislative and executive functions, but the transition from theory to practice was left to the framers of the Constitution. The term "president" was not new, however, for it had been applied to the presiding officer of legislative bodies in the colonies and in the Continental Congress. Likewise the New York constitution of 1777 and the Massachusetts constitution of 1780 suggested an independent executive, whose powers were somewhat comparable to those later granted to the president of the United States.

Delegates to the Constitutional Convention in Philadelphia in 1787 faced a dilemma when they considered establishing a "national executive." The majority of the framers of the constitution wanted an executive power capable of reaching the remotest parts of the Union, "not only for the purpose of enforcing national laws but also . . . for the purpose of bringing assistance to the states in grave emergencies of domestic disorder." The framers also wanted to avoid stirring up popular fear of the monarchy.

George P. A. Healy's "The Peacemakers" shows President Lincoln meeting with his military advisers toward the end of the Civil War. The U.S. Constitution clearly states that the president is commander in chief.

[illegible]

At the convention, Roger Sherman of Connecticut favored the notion of subordinating the chief executive to a legislature. According to James Madison's *Notes*, Sherman "considered the executive magistracy as nothing more than an institution for carrying the will of the legislature into effect," and he "wished that the number [of executives] might not be fixed, but that the legislature should be at liberty to appoint one or more as experience might dictate." Delegate James Wilson of Pennsylvania took an opposite view and argued in favor of a single executive with broad powers. Wilson, as James Madison recorded in his diary of the convention's proceedings, "preferred a single magistrate, as giving most energy, dispatch, and responsibility to the office." The executive, Wilson argued, should be independent of the legislature, and to preserve this status should be vested with an absolute veto over legislative enactments. Otherwise, the legislature would "at any moment sink it [the executive] into nonexistence." Furthermore the president should be elected directly by the people. Wilson had to compromise on a number of points, including the last one, for the convention decided that the president should be elected indirectly by the people through a college of electors. However, the core of Wilson's ideas, supported especially by Madison and Gouverneur Morris, was incorporated into the final document.

Section 1 of Article II of the Constitution clearly spells out and defines the basis of and qualifications for the office of president. It states:

> The executive Power shall be vested in a President of the United States of America. He shall hold his Office during the Term of four Years. . . .
>
> No Person except a natural born Citizen, or a Citizen of the United States, at the time of the Adoption of this Constitution, shall be eligible to the Office of President; neither shall any person be eligible to that Office who shall not have attained the Age of thirty five Years, and been fourteen Years a Resident within the United States.
>
> In Case of the Removal of the President from Office, or of his Death, Resignation, or Inability to discharge the Powers and Duties of the said Office, the Same shall devolve on the Vice-President, and the Congress may by Law provide for the Case of Removal, Death, Resignation or Inability, both of the President and Vice-President, declaring what Officer shall then act as President, and such Officer shall act accordingly, until the Disability be removed, or a President shall be elected.
>
> The President shall, at stated Times, receive for his Services, a Compensation, which shall neither be encreased nor diminished during the Period for which he shall have been elected, and he shall not receive within that period any other Emolument from the United States, or any of them.
>
> Before he enter on the Execution of his Office, he shall take the following Oath or Affirmation: —"I do solemnly swear (or affirm) that I will faithfully execute the Office of President of the United States, and will to the best of my Ability, preserve, protect and defend the Constitution of the United States."

Four constitutional amendments, relating directly to the presidency, were approved subsequently. The 12th amendment, proclaimed on Sept. 25, 1804, clarified the election procedure and defined the office of vice-president. A confused 1800 election result encouraged passage of the 12th amendment. The 20th, or Lame Duck amendment, was proclaimed on Feb. 6, 1933, and reduced the period between the election and inauguration of a president. The inauguration date now would be January 20, not March 4 as previously, and the session of Congress that had been held in the interim period was eliminated.

Franklin D. Roosevelt, an extremely active chief executive who took full advantage of his power, was the first and only president to be elected to four terms. As a result, sentiment in favor of limiting a president's time in office arose, and the 22nd amendment, limiting the president to two terms, was proclaimed on March 1, 1951.

The crises caused by the illness of President Dwight D. Eisenhower and the 1963 assassination of President John F. Kennedy focused attention on the issue of presidential succession and the need to establish a procedure for filling the vice-presidency when that office becomes vacant. As a result, the 25th amendment was passed by Congress, ratified by the states and proclaimed on Feb. 24, 1967.

Section 1 of the 25th amendment states that in case of the removal of the president from office or of his death or resignation, the vice-president shall become president. Section II provides that "whenever there is a vacancy in the office of vice-president, the president shall nominate a vice-president who shall take the office upon confirmation by a majority vote of both houses of Congress." Prior to the 25th amendment, the vice-presidency had been vacant on 16 occasions. Gerald R. Ford and Nelson A. Rockefeller were appointed vice-president by Presidents Nixon and Ford, respectively, and took office in accordance with the terms of the 25th amendment.

The amendment also provides for a means of dealing with a much more difficult aspect of presidential power: namely, that of

outlined the "State of the Union" to Congress. John Kennedy used the televised news conference to outline his program and objectives. presidential disability or inability to perform the powers and duties of the office. It provides for the resolution of the presidential inability problem in three ways. First, the president may declare his own inability, whereupon his "powers and duties shall be discharged by the vice-president as acting president." In this instance, the president may reclaim the powers and duties of the office by stating his ability to perform. Second, in the event the president cannot declare his own inability, the vice-president and a majority of the Cabinet may declare that such an inability exists, whereupon the "vice-president shall immediately assume the powers and duties of the office as acting president." Third, in the event that the vice-president and a majority of the Cabinet conclude that the president is unable to perform the powers and duties of the office and the president disagrees with this conclusion, the matter will be decided by Congress. "If the Congress, within 21 days . . . determines by two-thirds vote of both Houses that the president is unable to discharge the powers and duties of his office, the vice president shall . . . discharge the same as acting president; otherwise, the president shall resume the powers and duties of his office."

At various times there have been calls for reform of the presidency. A single, six-year term as well as a parliamentary government system have been suggested. During the 1950s, Sen. John W. Bricker, a Republican from Ohio, proposed an amendment to limit the power of the president under executive agreements. Generally, such efforts to change the office have not met with much success.

As presidential scholar Thomas E. Cronin has noted, "the original job of presidency has grown and yet the Founding Fathers wrote a marvelously flexible job description that is almost as appropriate today as it was when the nation was a new republic. The flexibility plus the willingness of the American people to place confidence in effective presidents give a president an enormous opportunity to serve the nation."

1797-1801. Served as U.S. minister to Prussia.
1803. Elected to the U.S. Senate as a Federalist; however, his independent policies led the party to replace him before the end of his term.
1809-14. Was minister to Russia
1814. Served on commission negotiating the Treaty of Ghent, ending the War of 1812.
1815-17. Was minister to Britain
1817. Appointed secretary of state under James Monroe.
1824. Ran for president, opposed by Henry Clay, William Crawford, and Andrew Jackson (all Democratic-Republicans). Jackson received the most votes, but as none of the four had a majority, the election went to the House of Representatives. In the House, Clay, who had won the fewest electoral votes and was thus out of the running, threw his support to Adams and ensured his election in Febraury 1825.
1829. Returned to Quincy after four years as president.
1830. Elected to the House of Representatives, where he would serve for 17 years. As a Congressman, argued for government's right to free slaves and against the annexation of Texas.
1848. Died on February 23 in the Capitol.

Highlights of Presidency

1825. Divisions in the Democratic-Republican Party increased when Adams appointed Henry Clay secretary of state, leading to charges that the two men had made a bargain in the election of 1824. ☐ Opposition in Congress prevented Adams from enacting most of his domestic program. ☐ Erie Canal, linking New York City and the Great Lakes, was completed.
1828. Congress imposed stiff duties on imported manufactured goods. ☐ Soundly defeated by Andrew Jackson in bid for reelection.

1828. Elected governor of New York but resigned after two months to become secretary of state under Andrew Jackson.
1829-31. As secretary of state, settled a dispute with Britain over West Indies trade and obtained an agreement whereby France would pay claims for U.S. ships damaged in the Napoleonic wars.
1831. Resigned as secretary of state, bringing about the resignation of the rest of the cabinet and allowing Jackson to reorganize it.
1832. Elected vice-president as Jackson's running mate
1836. Elected president with a wide electoral majority.
1841. Returned to his farm near Kinderhook, which he named Lindenwald
1848. Nominated for president by the antislavery Free Soil Party, which had split from the Democrats. The party split opened the way for the election of the Whig candidate, Zachary Taylor
1862. Died on July 24 at Kinderhook.

Highlights of Presidency

1837. On May 10, banks closed in Philadelphia and New York City, marking the start of the Panic of 1837. The panic, touched off by inflation and land speculation, was followed by an economic depression that lasted the rest of Van Buren's term
1839. A boundary dispute between Maine and New Brunswick brought the United States to the brink of war with Britain
1840. At Van Buren's urging, Congress established an independent treasury to hold federal funds. An attempt to safeguard funds from private bank failures, the treasury was abolished in 1841 but reinstated in 1846. ☐ Defeated by William Henry Harrison in the November presidential election.

William Henry Harrison

9th president, 1841 Whig

1773. Born on February 8 in Charles City county, VA.
1790. Left college to study medicine.
1791. Abandoned his studies to enlist in the army, serving in the Northwest Territory.
1795. Married Anna Symmes in November. The couple subsequently had ten children, only four of whom survived their father.
1798. After resigning from the army, appointed secretary of the Northwest Territory in June. Was elected the first delegate to Congress from the Northwest Territory in 1799.
1800. Following the division of the Northwest Territories into Ohio and Indiana, appointed governor of Indiana.
1809. As governor, negotiated the Treaty of Fort Wayne, which secured approximately 3 million acres (1.2 million ha) of land from four Indian tribes.
1811. In the Battle of Tippecanoe on November 7, defeated a federation of Indian tribes under the Shawnee chief Tecumseh, that was protesting the Treaty of Fort Wayne.
1812. Placed in command of the Army of the Northwest during the War of 1812.
1813. In October, won a major victory over combined British and Indian forces in the Battle of the Thames, in southern Ontario.

Moments later, 52 Americans, who had been held hostage in Iran since November 1979, were released. □ In July, nominated Sandra Day O'Connor as an associate justice of the U.S. Supreme Court. □ On August 13, signed into law the Economic Recovery Tax Bill and Omnibus Budget Reconciliation Bill.
1983. With U.S. forces participating in a multinational peacekeeping force in Lebanon, 241 U.S. servicemen are killed in terrorist attack in October. □ That same month, U.S. troops invade the Caribbean island of Grenada in an "effort to restore order and democracy."
1984. Reelected in a landslide
1985. In November, met with Soviet General Secretary Mikhail Gorbachev in Geneva.
1986. American warplanes bombed "terrorist-related targets" in Tripoli and Benghazi, Libya, in April.

Ronald Reagan, the 40th chief executive, welcomed his three predecessors to the White House in October 1981

Republican Zero

Prior to the ratification of the 12th Amendment in 1804, each elector cast two votes for President. The candidate receiving the largest number of votes (if a majority) became President, and the candidate receiving the second largest number became Vice President. In the event of a tie, or if no candidate received a majority, the House of Representatives chose the President from among the candidates receiving the three largest numbers of votes. The Senate chose the Vice President from among the two candidates receiving the largest number of votes. In 1800, Thomas Jefferson and Aaron Burr received the same number of votes for President. In 1824, John Quincy Adams was elected President by the House of Representatives although Andrew Jackson received more popular votes and more electoral votes than Adams. In 1836, Richard M. Johnson was elected Vice President by the Senate because he failed to receive a majority of electoral votes. In 1876, Samuel J. Tilden received a majority of the popular votes cast for President, but Rutherford B. Hayes was declared elected by the Electoral Commission, which had been established by Congress to settle disputed returns from Florida, Louisiana, Oregon, and South Carolina. Hayes received one electoral vote more than the majority of 185 votes required for election. In 1888, Benjamin Harrison received a majority of the electoral votes although Grover Cleveland received more popular votes. In 1892, Cleveland received more popular votes than Harrison or Weaver and a majority of the electoral votes. In 1912, Woodrow Wilson received a majority of the electoral votes although Theodore Roosevelt received more popular votes than Wilson or Taft. In 1948, Harry S. Truman received more popular votes than Dewey, Thurmond, or Wallace and a majority of the electoral votes although Dewey received more electoral votes than Truman, Thurmond, or Wallace. In 1960, John F. Kennedy received more popular votes than Richard M. Nixon and a majority of the electoral votes although Nixon received more electoral votes than Kennedy. In 1968, Richard M. Nixon received more popular votes than Hubert H. Humphrey or George C. Wallace and a majority of the electoral votes although Humphrey received more electoral votes than Wallace. In 1976, Jimmy Carter received more popular votes than Gerald Ford and a majority of the electoral votes although Ford received more electoral votes than Carter. In 1980, Ronald Reagan received more popular votes than Jimmy Carter or John Anderson and a majority of the electoral votes although Carter received more electoral votes than Reagan or Anderson. In 1984, Ronald Reagan received more popular votes than Walter Mondale or David Bergland and a majority of the electoral votes although Mondale received more electoral votes than Reagan or Bergland.

[8] Dick Gregory received 47,133 popular votes for President in Alabama, Georgia, Mississippi, and Louisiana. [9] Eugene J. McCarthy received 25,[illegible]82[illegible] popular votes for President in Alabama, Colorado, Oregon, and Washington. [10] Ballots for Hawaii's 4 electoral votes were cast for Richard M. Nixon and Spiro T. Agnew by the Republican Party, and for Hubert H. Humphrey and Edmund S. Muskie by the Democratic Party. [11] Jimmy Carter received 297 electoral votes for President and Walter F. Mondale received 240 electoral votes for Vice President. [12] One elector from the District of Columbia voted for Ronald Reagan and Jack Kemp. [13] One elector from the State of Washington voted for Ronald Reagan.

The White House

THE WHITE HOUSE

The White House, located at 1600 Pennsylvania Avenue, N.W., in Washington DC, has been the home of every U.S. president since John Adams. The presidential mansion is situated on some 18 acres (7.3 hectares) of land amid a parklike setting. The building's main section measures 170 feet (52 meters) long and 85 feet (26 meters) deep. Its 2½ stories are mounted on an English basement, which, because of the slope of the land, becomes a ground floor on the south side. Two wings flank the original structure. The West Wing was constructed in 1902, following a Congressional appropriation of $65,196. It contains the Oval (presidential) Office, the Roosevelt or staff meeting room, a reception room, and the Cabinet Room. French doors within the president's office open onto the Rose Garden, which continues to follow the plan of an 18th century flower garden. The president regularly receives official visitors in the Rose Garden. The East Wing was built in 1942 and contains offices for presidential aides. The Jacqueline Kennedy Garden, so named by Mrs. Lyndon B. Johnson in honor of her predecessor, is off the East Wing and is used by the First Lady as a reception area.

Prior to 1902, the ground floor served as the president's work area. This floor now features the Library, which was completely reorganized in 1962; the Vermeil or Gold Room, which serves as a display room as well as a ladies' sitting room; the China or "Presidential Collection Room," which includes a wide exhibit of White House China; the Diplomatic Reception Room (formerly, a boiler room; and the Map Room, from which President Franklin D. Roosevelt monitored the events of World War II.

Although the rooms of the first (state) floor have been refurbished many times over the years, the floor has not changed architecturally since the White House was designed by John Hoban in 1792. The East Room, three reception rooms (the Green Room, Blue Room, and Red Room), the State Dining Room, and the Family Dining Room comprise the first floor. With the exception of the Family Dining Room, these rooms are open to the public. The East Room, called the "Public Audience Room" by Hoban, retains its classical style of the early 19th century. It has been the scene of many White House dances, concerts, weddings, funerals, and bill-signing ceremonies. Gerald R. Ford took the oath of office in the East Room when he succeeded Richard M. Nixon as chief executive. The State Dining Room was originally much smaller and functioned as a drawing room, office, and cabinet room. The dining hall now can seat as many as 140 guests. The second floor includes the Queen's Suite, formerly the Rose Guest Room and now a sitting room and bedroom; the Lincoln Bedroom, which was the office and the cabinet room of the 16th chief executive, the adjoining Lincoln Sitting Room; and a former Cabinet Room, which was designated the Treaty Room during the John Kennedy administration to reflect the many important decisions made in it. The private quarters of the president and his family are located on the west end of the second floor.

History. Construction of the White House was begun in 1792 after an architectural competition won by James Hoban, an Irish-born architect who had immigrated to America some years earlier. After many delays and financial problems the building was habitable (but not completed) in 1800, when President John Adams and his wife, Abigail, moved in. Hoban's original drawing of the north façade, which has survived, reflects the English-Palladian architecture of the mid-18th century.

Thomas Jefferson, the second president to occupy the White House, employed the gifted architect Benjamin H. Latrobe in 1806 to help design the east and west pavilions. The latter has survived in its nearly original state. Latrobe also made designs for the north and south porticoes which were executed in a modified form at a later date.

In 1814 during the War of 1812, British forces burned all of the public buildings in Washington. The White House was not spared. With the exception of a Gilbert Stuart portrait of George Washington, now in the East Room, all of the furnishings from the Adams, Jefferson, and Madison administrations were destroyed. Under James Hoban's supervision the White House was rebuilt and was ready for occupancy in 1817, refurnished in the Empire Style with items imported from France by President James Monroe. However, in the architecture of the building, and particularly in the interior, Hoban returned to his earlier Palladian style and did not repeat the neoclassic innovations made by Latrobe. The scorched exterior walls were painted white. There is misconception that this is why the building was called the White House. Actually it had borne that name since it was first built.

Throughout the 19th century the interior of the White House went through each successive decorative style, but the exterior appearance of the building remained the same. Gas lighting was introduced in 1849 and central heating in 1853. The first bathroom was installed in 1877. In 1833 pipes bringing water from a nearby spring replaced the pump formerly used. After 1853 water was piped in from the city's water system. Electricity came to the White House during the residency of Benjamin Harrison.

In 1902, during the administration of President Theodore Roosevelt, the White House underwent its first major renovation, under the direction of the architectural firm of McKim, Mead, and White. The rooms of the first floor were stripped of their Victorian

The White House: The large North Entrance Hall, *top left*, was part of James Hoban's original architectural plan for the mansion. Prior to completion of the West Wing in the early 1900s, the hall was a reception area. The oval Blue Room, *bottom left*, includes French Empire style furnishings from the James Monroe administration. Although each president can alter the design and decor of the Oval Office, tradition dictates the correct positions of the U.S. and presidential flags. The Lincoln Bedroom, *right*, which was used by the 16th chief executive as an office and cabinet room, was decorated with bedroom furniture from the Lincoln era during the Truman years. George P.A. Healy's portrait of Lincoln hangs over the mantel in the State Dining Room. As many as 140 guests can dine in the gold- and white-dominated room. overlay and returned to their early-19th-century appearance. The grand staircase was moved into the entrance hall to permit the creation of the State Dining Room at the southwest corner of the building.

In 1949, during the administration of President Harry S. Truman, the White House was found unsafe for occupancy. The exterior walls were retained while the interior fabric of the building was removed and rebuilt on a steel and concrete frame. Great care was taken to preserve the original woodwork, marble mantle pieces, and decorative plasterwork. The original floor plan was followed faithfully. A balcony, now known as the Truman Balcony, was built on the second-floor level of the South portico. It has become a favorite spot of presidential families.

Under the guidance of Mrs. John F. Kennedy, the restoration of the interior of the White House to its original late 18th and early 19th-century appearance was begun. A Fine Arts Committee, composed of museum specialists and others, was formed to direct the work of restoration. This committee was further strenghtened by a special Advisory Committee and a Paintings Committee. Prior to this there had been little attempt to preserve or to use historic White House furnishings, and the rooms of the first floor were largely furnished with reproductions. Many important objects were recovered from White House storage areas. Other outstanding examples of American cabinetmaking and the decorative arts were supplied by generous donors. Mrs. Kennedy felt strongly that "everything in the White House must have a reason for being there." Subsequently, the Committee for the Preservation of the White House and the permanent office of curator were established by President Johnson. Additional pieces of valuable furniture and American paintings were acquired for the White House during the Nixon administration, and the principal rooms of the first and ground floors were redecorated during the Nixon years. After moving to the executive mansion in January 1981, Mrs. Ronald Reagan oversaw the remodeling of the first and second floor rooms and several preservation projects.

For the American public, the executive mansion has become a national palace as well as a home for the chief executive. For, in the words of President Dwight D. Eisenhower, the "White House has been and should always remain a place to be venerated by its occupants as well as by all Americans."

The Lyndon Baines Johnson Library

On the University of Texas campus in Austin, the Lyndon Baines Johnson Library, *above*, houses the papers of the 36th president's career in public service. The "Kennedy rocker," his desk, and other memorabilia are displayed at the John Fitzgerald Kennedy Library in Boston.

U. S. PRESIDENTIAL LIBRARIES

At various times in American history, Congress has appropriated funds to maintain the papers of former presidents. These collections, extending from the administration of George Washington to the era of Calvin Coolidge and including some 2 million manuscripts, are located in the Library of Congress. The first separate presidential library, the Franklin D. Roosevelt Library in Hyde Park, was established by a joint resolution of Congress in 1939 and was dedicated on July 4, 1940. The other presidential libraries are:

Herbert Hoover Presidential Library; located in West Branch, IA; dedicated on Aug. 10, 1962.

Harry S. Truman Presidential Library; located in Independence, MO; dedicated on July 6, 1957.

Dwight D. Eisenhower Presidential Library; located in Abilene, KS; dedicated on May 1, 1962.

John F. Kennedy Presidential Library; located in Boston, MA; dedicated on Oct. 20, 1979.

Lyndon B. Johnson Presidential Library; located in Austin, TX; dedicated on May 22, 1971

Gerald R. Ford Presidential Library; located in Ann Arbor, MI; dedicated on April 27, 1981.

Jimmy Carter Presidential Library; located in Atlanta, GA; scheduled for dedication in late 1986.

They were built with private monies, donated to the federal government, and are administrated by the National Archives.
